MEDALOGIX

- Who is Medalogix?
- Problems We Solve

Medalogix Philosophy

IDENTIFY

Using OASIS, meds, vitals, and ancillary data sets to leverage predictive analytics to identify patients most at risk of transferring

ACT

Schedule automated and/or manual calls in order to spread your reach to drive episode management

IMPROVE

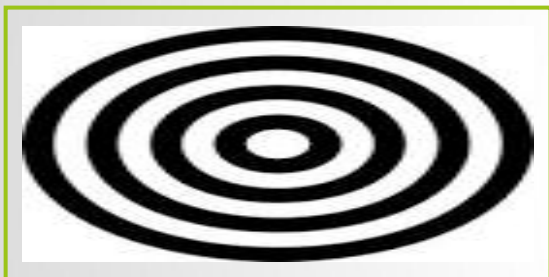

Review call volume, coverage rate, touchpoint history, etc.

Benefits of Medalogix Touch

ACCURACY

Arm your Rehospitalization Management Team with the analytical and organizational tools they need to target the neediest patients

EFFICIENCIES

Use objective risk percentiles to inform how you deploy telehealth

SCALE

Incorporating IVR into your episode management allows you to handle more patients without immediately adding more staff. A peer-reviewed HIS saw a 5.5% TIF reduction by using IVR.

How it works

Home Health Episode

Home Health Episode

- **Leverage Medalogix Touch to identify high risk patients and maximize operational effectiveness**
 - Patients who have recently admitted and are high risk for Inpatient Transfer
 - Inform telehealth deployments
 - Implement IVR as appropriate to achieve scalable touchpoints
 - Patients who are approaching discharge to help facilitate the EOE planning process and identify action plan for BPCI patients

Leverage Medalogix Touch to identify high risk patients and maximize operational effectiveness

- Patients who have recently admitted and are high risk for Inpatient Transfer
- Inform telehealth deployments
- Implement IVR as appropriate to achieve scalable touchpoints
- Patients who are approaching discharge to help facilitate the EOE planning process and identify action plan for BPCI patients

Leverage BPCI-specific functionality to keep in touch with patients even if they have been discharged early.
