**MACRA Mini Summit XI: Lessons
Learned for Specialty APMs
The Oncology Care Model
2:00 pm June 18th**

**Barbara L. McAneny, MD
Immediate Past President,
American Medical Association**

What's Problematic About the OCM: Target Calculation

- 16K historical episode data (2012-2015) from CMS
- Residual Value : OCM model predicted value - actual values for each historical episode
- Residual Plot: Scatter Plot of Residual vs Predicted Value
- If the points are not randomly dispersed across the red line, than a linear regression model is inappropriate. $R\text{-squared} = 0.334$
- Time and Clinical data are not included in the model -> Residual plot not randomly dispersed around the red line.
