

Introduction ANSI X12 Standards

Introduction to ANSI X12 Standards

004010

Who needs to understand them?

Session Objectives

- Standards support business activity
- Introduce standards documentation
- Introduce standards implementation guidelines
- Develop sample 837 transaction set

NORMAL BUSINESS

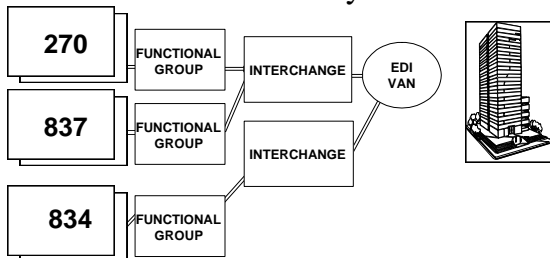

Introduction ANSI X12 Standards

PAPER vs EDI

Document -	Transaction
Little Envelope -	Functional Group
Big Envelope -	Interchange
Postal Service -	VAN
Courier Delivery -	Point-to-Point
Human Audit -	Machine Audit

EDI Delivery

Standards Language

Document -	Transaction
Line -	Segment
Phrase -	Composite Element
Word -	Simple Element
Code -	Identifier
Punctuation -	Delimiters
Grammar -	Syntax

Introduction ANSI X12 Standards

SEGMENT

- An ordered collection of elements
- Elements are variable length
- Elements are delimited by element separators
- Segment ends with segment terminator

Data Element Dictionary

- Listed numerically
- Same in all segments
- Data & position vary
- Length min & max
- Code lists
- Type of data

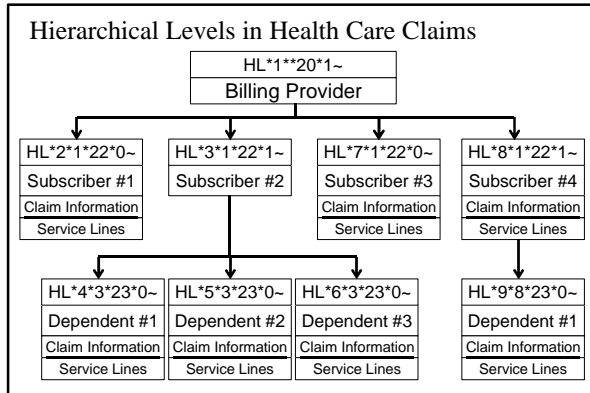

HL Hierarchical Level

- | | | |
|-------------|------------|--|
| HL01 | 628 | Hierarchical ID Number
The first HL01=1, in subsequent HL segments the value is incremented by 1. |
| HL02 | 734 | Hierarchical Parent Number
The HL02 identifies the HL01 that is the parent of this HL segment. |
| HL03 | 735 | Hierarchical Level Code
"20" = Billing Provider
"22" = Subscriber – Child to Billing Provider
"23" = Dependent – Child to Subscriber |
| HL04 | 736 | Hierarchical Child Code
"0" No Subordinate HL Segment
"1" Additional Subordinate HL Data Segment |

Introduction ANSI X12 Standards

Valid Element Types

- AN - Alphanumeric
- B - Binary
- Nn - Numeric (n decimals)
- R - Decimal (explicit)
- ID - Code
- DT - Date
- TM - Time

- AN 6/6 - Exactly 6 characters long
- R 7/10 - From 7 to 10 digits long

LENGTH

Sign & decimal are not counted in length.

Introduction ANSI X12 Standards

QUALIFIER & VALUE

- Pairs elements (qualifier & value)
- Flexible transaction definitions
- Reuse elements

004000 ANSI - 1997
004010 Draft X12 Oct 97

CHANGES

- Simplify data.
- Eliminate transactions.
- Utilize status information rather than batch data.
- Reengineer business processes.
- Exchange information more frequently.

Introduction ANSI X12 Standards

Session Summary

- ✓ Standards are based on business requirements.
- ✓ There are multiple details to coordinate.
- ✓ One person should not make all decisions.
- ✓ The business process will change over time.

IMPLEMENTATION

837 Health Care Claim: Professional

1. The 837 transaction is designed to transmit one or more claims for each billing provider. The hierarchy of the looping structure is billing provider, subscriber, patient, claim level, and claim service line level. Billing providers who sort claims using this hierarchy will use the 837 more efficiently because information that applies to all lower levels in the hierarchy will not have to be repeated within the transaction.
2. This standard is also recommended for the submission of similar data within a pre-paid managed care context. Referred to as capitated encounters, this data usually does not result in a payment, though it is possible to submit a "mixed" claim that includes both pre-paid and request for payment services. This standard will allow for the submission of data from providers of health care products and services to a Managed Care Organization or other payer. This standard may also be used by payers to share data with plan sponsors, employers, regulatory entities and Community Health Information Networks.
3. This standard can, also, be used as a transaction set in support of the coordination of benefits claims process. Additional looped segments can be used within both the claim and service line levels to transfer each payer's adjudication information to subsequent payers.

Table 2 - Detail, Patient Hierarchical Level

For purposes of this documentation, the claim detail information is presented only in the dependent level. Specific claim detail information can be given in either the subscriber or the dependent hierarchical level. Because of this the claim information is said to "float." Claim information is positioned in the same hierarchical level that describes its owner-participant, either the subscriber or the dependent. In other words, the claim information, loop 2300, is placed following loop 2010BD in the subscriber hierarchical level when the patient is the subscriber, or it is placed at the patient/dependent hierarchical level when the patient is the dependent of the subscriber as shown here. When the patient is the subscriber, loops 2000C and 2010CA are not sent. See 2.3.2.1, HL Segment, for details.

STANDARD

837 Health Care ClaimFunctional Group ID: **HC**

This Draft Standard for Trial Use contains the format and establishes the data contents of the Health Care Claim Transaction Set (837) for use within the context of an Electronic Data Interchange (EDI) environment. This transaction set can be used to submit health care claim billing information, encounter information, or both, from providers of health care services to payers, either directly or via intermediary billers and claims clearinghouses. It can also be used to transmit health care claims and billing payment information between payers with different payment responsibilities where coordination of benefits is required or between payers and regulatory agencies to monitor the rendering, billing, and/or payment of health care services within a specific health care/insurance industry segment.

For purposes of this standard, providers of health care products or services may include entities such as physicians, hospitals and other medical facilities or suppliers, dentists, and pharmacies, and entities providing medical information to meet regulatory requirements. The payer refers to a third party entity that pays claims or administers the insurance product or benefit or both. For example, a payer may be an insurance company, health maintenance organization (HMO), preferred provider organization (PPO), government agency (Medicare, Medicaid, Civilian Health and Medical Program of the Uniformed Services (CHAMPUS), etc.) or an entity such as a third party administrator (TPA) or third party organization (TPO) that may be contracted by one of those groups. A regulatory agency is an entity responsible, by law or rule, for administering and monitoring a statutory benefits program or a specific health care/insurance industry segment.

REFERENCE 2

BLANK PAGE

2010, Loop ID-2420, etc.). For example, loop 2310 has five possible uses identified: referring provider, rendering provider, purchased service provider, service facility location, and supervising provider. These loops are labeled 2310A, 2310B, 2310C, 2310D, and 2310E. Each of these 2310 loops is an equivalent loop. Because they do not specify an HL, it is not necessary to use them in any particular order. In a similar fashion, it is acceptable to send subloops 2010BB, 2010BD, 2010BA, and 2010BC in that order as long as they all belong to the same subloop. However, it is not acceptable to send subloop 2330 before loop 2310 because these are not equivalent subloops.

In a similar manner, if a single loop has many iterations (repetitions) of a particular segment all the iterations of that segment are equivalent. For example there are many DTP segments in the 2300 loop. These are equivalent segments. It is not required that Order Date be sent before Initial Treatment date. However, it is required that the DTP segment in the 2300 loop come after the CLM segment because it carried in a different position within the 2300 loop.

Translators should distinguish between equivalent subloops and segments by qualifier codes (e.g., the value carried in NM101 in loops 2010BA, 2010 BB, and 2010BC; the values in the DTP01s in the 2300 loop), not by the position of the subloop or segment in the transaction. The number of times a loop or segment can be repeated is indicated in the detail information on that portion of the transaction.

2.2.1 Required and Situational Loops

Loop usage within ASC X12 transactions and their implementation guides can be confusing. Care must be used to read the loop requirements in terms of the context or location within the transaction.

The usage designator of a loop's beginning segment indicates the usage of the loop. If a loop is used, the first segment of that loop is required even if it is marked Situational. An example of this is the 2010AB - Pay-to Provider loop.

In the 837 Professional Implementation Guide loops that are required on all claims/encounters are the Header, 1000A - Submitter Name, 1000B - Receiver Name, 2000A - Billing/Pay-to Provider Hierarchical Level, 2010AA - Billing Provider Name, 2000B - Subscriber Hierarchical Level, 2010BA -Subscriber Name, 2010BB - Payer Name, 2300 - Claim Level Information, and 2400 Service Line. The use of all other loops is dependent upon the nature of the claim/encounter.

If the usage of the first segment in a loop is marked Required, the loop must occur at least once unless it is nested in a loop that is not being used. An example of this is Loop ID-2330A - Other Subscriber Name. Loop 2330A is required only when Loop ID-2320 - Other Subscriber Information is used, i.e., if the claim involves coordination of benefits information. A parallel situation exists with the Loop ID-2330B - Other Payer Name. A note on the Required initial segment of a nested loop will indicate dependency on the higher level loop.

If the first segment is Situational, there will be a segment note addressing use of the loop. Any required segments in loops beginning with a Situational segment only occur when the loop is used. For an example of this see Loop ID-2010AB - Pay-to Provider. In the 2010AB loop, if the loop is used, the initial segment, NM1 - Pay-to Provider Name must be used. Use of the N2 and REF segments are optional, but the N3 and N4 segments are required.

2.3 Data Use by Business Use

The 837 is divided into two levels, or tables. The Header level, Table 1, contains transaction control information. The Detail level, Table 2, contains the detail information for the transaction's business function and is presented in 2.3.2, Table 2 - Detail Information.

2.3.1 Table 1 — Transaction Control Information

Table 1 is named the Header level (see figure 4, Header Level). Table 1 identifies the start of a transaction, the specific transaction set, and the transaction's business purpose. Additionally, when a transaction set uses a hierarchical data structure, a data element in the header BHT01 — the Hierarchical Structure Code — relates the type of business data expected to be found within each level.

Table 1 - Header					
POS. #	SEG. ID	NAME	USAGE	REPEAT	LOOP REPEAT
005	ST	Transaction Set Header	R	1	
010	BHT	Beginning of Hierarchical Transaction	R	1	
015	REF	Transmission Type Identification	R	1	
		...			

Figure 4. Table 1 — Header Level

2.3.1.1 837 Table 1 — Header Level

The following is a coding example of Table 1 in the 837. Refer to Appendix A, ASC X12 Nomenclature, for descriptions of data element separators (e.g., *) and segment terminators (e.g., ~).

ST*837*0001~

837 = Transaction set identifier code
0001 = Transaction set control number

BHT*0019*00*98766Y*19970315*0001*CH~

0019 = Hierarchical structure code (information source, subscriber, dependent)
00 = Original
98766Y = Submitter's batch control number
19970315 = Date of file creation
0001 = Time of file creation
CH = Chargeable (claims)

REF*87*004010X098~

87 = Functional category
004010X098 = Professional Implementation Guide

The Transaction Set Header (ST) segment identifies the transaction set by using 837 as the data value for the transaction set identifier code data element, ST01. The transaction set originator assigns the unique transaction set control number ST02, shown in the previous example as 0001. In the example, the health care provider is the transaction set originator.

The Beginning of Hierarchical Transaction (BHT) segment indicates that the transaction uses a hierarchical data structure. The value of 0019 in the hierarchi-

cal structure code data element, BHT01, describes the order of the hierarchical levels and the business purpose of each level. See Section 2.3.1.2, Hierarchical Level Data Structure, for additional information about the BHT01 data element.

The BHT segment also contains the transaction set purpose code, BHT02, which indicates **original transaction** by using data value 00. The submitter's business application system generates the following fields: BHT03, originator's reference number; BHT04, date of transaction creation; BHT05, time of transaction creation. BHT02 is used to indicate the status of the transaction batch, i.e., is the batch an original transmission or a reissue (resubmitted) batch. BHT06 is used to indicate the type of billed service being sent: fee-for-service (claim) or encounter or a mixed bag of both.

Because the 837 is multi-functional, it is important for the receiver to know which business purpose is served, so the REF in the Header is used. A data value of 87 in REF 01 indicates the **functional category**, or type, of 837 being sent. Appropriate values for REF02 are as follows: 004010X098 for a Professional 837 transaction, 004010X097 for Dental, and 004010X096 for Institutional.

The Functional Group Header (GS) segment also identifies the business purpose of multi-functional transaction sets. See Appendix A, ASC X12 Nomenclature, for a detailed description of the elements in the GS segment.

2.3.1.2 Hierarchical Level Data Structure

The hierarchical level (HL) structure identifies and relates the participants involved in the transaction. The participants identified in the 837 Professional transaction are generally billing/pay-to provider, subscriber, and patient (when the patient is not the same person as the subscriber). The 0019 value in the BHT hierarchical structure code (BHT01) describes the appearance order of subsequent loops within the transaction set and refers to these participants, respectively, in the following terms:

- information source (billing provider)
- subscriber (can be the patient when the patient is the subscriber)
- dependent (patient, when the patient is not the subscriber)

The term "billing provider" indicates the information source HL. The term "patient" indicates the dependent HL.

2.3.2 Table 2 — Detail Information

Table 2 uses the hierarchical level structure. Each hierarchical level is comprised of a series of loops. Numbers identify the loops. The hierarchical level that identifies the participants and the relationship to other participants is Loop ID-2000. The individual or entity information is contained in Loop ID-2010.

2.3.2.1 HL Segment

The following information illustrates claim/encounter submissions when the patient is the subscriber and when the patient is not the subscriber.

NOTE

Specific claim detail information can be given in either the Subscriber or the Dependent hierarchical level. Because of this, the claim information is said to "float."

Claim information is positioned in the same hierarchical level that describes its owner-participant, either the subscriber or the dependent. In other words, the claim information is placed at the subscriber hierarchical level when the patient is the subscriber, or it is placed at the patient/dependent hierarchical level when the patient is the dependent of the subscriber.

Claim/encounter submission when the **patient is the subscriber:**

Billing provider (HL03=20)

Subscriber (HL03=22)

Claim level information

Line level information

Claim/encounter submission when the **patient is not the subscriber:**

Billing provider (HL03=20)

Subscriber (HL03=22)

Patient (HL03=23)

Claim level information

Line level information

The Billing Provider or Subscriber HLs may contain multiple “child” HLs. A child HL indicates an HL that is nested within (subordinate to) the previous HL. Hierarchical levels may also have a “parent” HL. A parent HL is the HL that is one level out in the nesting structure. An example follows.

Billing provider HL **Parent HL** to the Subscriber HL

Subscriber HL **Parent HL** to the Patient HL; **Child HL** to the Billing
Provider HL

Patient HL **Child HL** to the Subscriber HL

For the subscriber HL, the billing provider HL is the parent. The patient HL is the child. The subscriber HL is contained within the billing provider HL. The patient HL is contained within the subscriber HL.

If the billing provider is submitting claims for more than one subscriber, each of whom may or may not have dependents, the HL structure between the transaction set header and trailer (ST–SE) could look like the following:

BILLING PROVIDER

SUBSCRIBER #1 (Patient #1)

Claim level information

Line level information, as needed

SUBSCRIBER #2

PATIENT #P2.1 (e.g., subscriber #2 spouse)

Claim level information

Line level information, as needed

PATIENT #P2.2 (e.g., subscriber #2 first child)

Claim level information

Line level information, as needed

PATIENT #P2.3 (e.g., subscriber #2 second child)

Claim level information

Line level information, as needed

SUBSCRIBER #3 (Patient #3)

Claim level information

Line level information, as needed

SUBSCRIBER #4 (Patient #4)

Claim level information

Line level information, as needed

IMPLEMENTATION

RECEIVER NAME

Loop: 1000B — RECEIVER NAME Repeat: 1

Usage: REQUIRED

Repeat: 1

Notes: 1. Because this is a required segment, this is a required loop. See Appendix A for further details on ASC X12 syntax rules.

Example: NM1*40*2*UNION MUTUAL OF OREGON*****46*11122333~

STANDARD

NM1 Individual or Organizational Name

Level: Header

Position: 020

Loop: 1000 Repeat: 10

Requirement: Optional

Max Use: 1

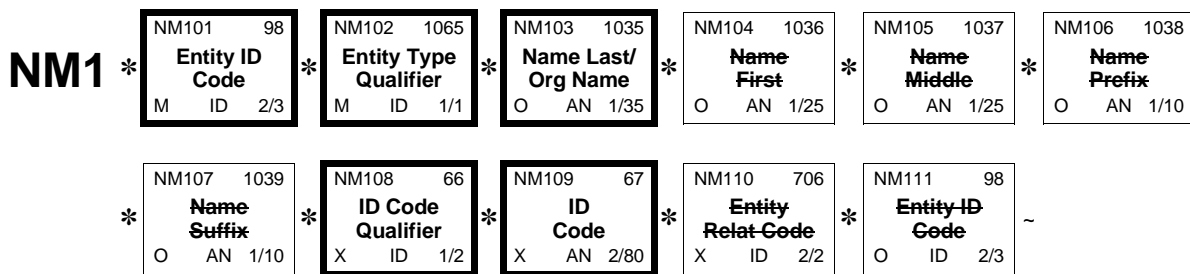

Purpose: To supply the full name of an individual or organizational entity

Set Notes: 1. Loop 1000 contains submitter and receiver information. If any intermediary receivers change or add data in any way, then they add an occurrence to the loop as a form of identification. The added loop occurrence must be the last occurrence of the loop.

Syntax: 1. **P0809**
If either NM108 or NM109 is present, then the other is required.

2. **C1110**
If NM111 is present, then NM110 is required.

DIAGRAM

IMPLEMENTATION

BILLING PROVIDER NAME

Loop: 2010AA — BILLING PROVIDER NAME Repeat: 1

Usage: REQUIRED

Repeat: 1

Notes: 1. Although the name of this loop/segment is “Billing Provider” the loop/segment really identifies the billing entity. The billing entity does not have to be a health care provider to use this loop. However, some payers do not accept claims from non-provider billing entities.

2. Because this is a required segment, this is a required loop. See Appendix A for further details on ASC X12 syntax rules.

Example: NM1*85*2*CRAMMER, DOLE, PALMER, AND
JOHNANSE*****24*111223333~

STANDARD

NM1 Individual or Organizational Name

Level: Detail

Position: 015

Loop: 2010 Repeat: 10

Requirement: Optional

Max Use: 1

Purpose: To supply the full name of an individual or organizational entity

Set Notes: 1. Loop 2010 contains information about entities that apply to all claims in loop 2300. For example, these entities may include billing provider, pay-to provider, insurer, primary administrator, contract holder, or claimant.

Syntax: 1. **P0809**
If either NM108 or NM109 is present, then the other is required.

2. **C1110**
If NM111 is present, then NM110 is required.

IMPLEMENTATION

BILLING/PAY-TO PROVIDER HIERARCHICAL LEVEL

Loop: 2000A — BILLING/PAY-TO PROVIDER HIERARCHICAL LEVEL **Repeat:** >1

Usage: REQUIRED

Repeat: 1

- Notes:**
1. Use the Billing Provider HL to identify the original entity who submitted the electronic claim/encounter to the destination payer identified in Loop ID-2010BB. The billing provider entity may be a health care provider, a billing service, or some other representative of the provider.
 2. The NSF fields shown in Loop ID-2010AA and Loop ID-2010AB are intended to carry billing provider information, not billing service information. Refer to your NSF manual for proper use of these fields. If Loop 2010AA contains information on a billing service (rather than a billing provider), do not map the information in that loop to the NSF billing provider fields for Medicare claims.
 3. The Billing/Pay-to Provider HL may contain information about the Pay-to Provider entity. If the Pay-to Provider entity is the same as the Billing Provider entity, then only use Loop ID-2010AA.
 4. Because this is a required segment, this is a required loop. See Appendix A for further details on ASC X12 syntax rules.
 5. Receiving trading partners may have system limitations regarding the size of the transmission they can receive. The developers of this implementation guide recommend that trading partners limit the size of the transaction (ST-SE envelope) to a maximum of 5000 CLM segments. While the implementation guide sets no specific limit to the number of Billing/Pay-to Provider Hierarchical Level loops, there is an implied maximum of 5000.
 6. If the Billing or Pay-to Provider is also the Rendering Provider and Loop ID-2310A is not used, the Loop ID-2000 PRV must be used to indicate which entity (Billing or Pay-to) is the Rendering Provider.

Example: HL*1**20*1~

STANDARD

HL Hierarchical Level

<table border="1"> <thead> <tr> <th>CODE</th> <th>DEFINITION</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Additional Subordinate HL Data Segment in This Hierarchical Structure.</td> </tr> </tbody> </table>					CODE	DEFINITION	1	Additional Subordinate HL Data Segment in This Hierarchical Structure.
CODE	DEFINITION							
1	Additional Subordinate HL Data Segment in This Hierarchical Structure.							

IMPLEMENTATION

SUBSCRIBER HIERARCHICAL LEVEL

Loop: 2000B — SUBSCRIBER HIERARCHICAL LEVEL **Repeat:** >1

Usage: REQUIRED

Repeat: 1

- Notes:**
1. If the insured and the patient are the same person, use this HL to identify the insured/patient, skip the subsequent (PATIENT) HL, and proceed directly to Loop ID-2300.
 2. The Subscriber HL contains information about the person who is listed as the subscriber/insured for the destination payer entity (Loop ID-2010BA). The Subscriber HL contains information identifying the subscriber (Loop ID-2010BA), his or her insurance (Loop ID-2010BB), and responsible party (Loop ID-2010BC). In addition, information about the credit/debit card holder is placed in this HL (Loop ID-2010BD). The credit/debit card holder may or may not be the subscriber. See Appendix G, Credit/Debit Card Use, for a description of using Loop ID-2010BD.
 3. Because this is a required segment, this is a required loop. See Appendix A for further details on ASC X12 syntax rules.
 4. Receiving trading partners may have system limitations regarding the size of the transmission they can receive. The developers of this implementation guide recommend that trading partners limit the size of the transaction (ST-SE envelope) to a maximum of 5000 CLM segments. While the implementation guide sets no specific limit to the number of Subscriber Hierarchical Level loops, there is an implied maximum of 5000.

Example: HL*2*1*22*1~

STANDARD

HL Hierarchical Level

Level: Detail

Position: 001

Loop: 2000 **Repeat:** >1

Requirement: Mandatory

Max Use: 1

Purpose: To identify dependencies among and the content of hierarchically related groups of data segments

DIAGRAM

ELEMENT SUMMARY

USAGE	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
REQUIRED	HL01	628	Hierarchical ID Number A unique number assigned by the sender to identify a particular data segment in a hierarchical structure COMMENT: HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example, HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment and would be incremented by one in each subsequent HL segment within the transaction.	M AN 1/12
REQUIRED	HL02	734	Hierarchical Parent ID Number Identification number of the next higher hierarchical data segment that the data segment being described is subordinate to COMMENT: HL02 identifies the hierarchical ID number of the HL segment to which the current HL segment is subordinate.	O AN 1/12
REQUIRED	HL03	735	Hierarchical Level Code Code defining the characteristic of a level in a hierarchical structure COMMENT: HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order, or item-level information.	M ID 1/2

CODE	DEFINITION
------	------------

22	Subscriber
----	-------------------

REQUIRED	HL04	736	Hierarchical Child Code Code indicating if there are hierarchical child data segments subordinate to the level being described COMMENT: HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.	O ID 1/1
----------	------	-----	---	----------

The claim loop (Loop ID-2300) can be used both when HL04 has no subordinate levels (HL04 = 0) or when HL04 has subordinate levels indicated (HL04 = 1).

In the first case (HL04 = 0), the subscriber is the patient and there are no dependent claims. The second case (HL04 = 1) happens when claims/encounters for both the subscriber and a dependent of theirs are being sent under the same billing provider HL (e.g., a father and son are both involved in the same automobile accident and are treated by the same provider). In that case, the subscriber HL04 = 1 because there is a dependent to this subscriber, but the 2300 loop for the subscriber/patient (father) would begin after the subscriber HL. The dependent HL (son) would then be run and the 2300 loop for the dependent/patient would be run after that HL. HL04=1 would also be used when a claim/encounter for a only a dependent is being sent.

CODE	DEFINITION
------	------------

0	No Subordinate HL Segment in This Hierarchical Structure.

1	Additional Subordinate HL Data Segment in This Hierarchical Structure.
---	---

IMPLEMENTATION

PATIENT HIERARCHICAL LEVEL

Loop: 2000C — PATIENT HIERARCHICAL LEVEL Repeat: >1

Usage: SITUATIONAL

Repeat: 1

- Notes:
1. This HL is required when the patient is a different person than the subscriber. There are no HLs subordinate to the Patient HL.
 2. Because the usage of this segment is “Situational” this is not a syntactically required loop. If this loop is used, then this segment is a “Required” segment. See Appendix A for further details on ASC X12 syntax rules.
 3. Receiving trading partners may have system limitations regarding the size of the transmission they can receive. The developers of this implementation guide recommend that trading partners limit the size of the transaction (ST-SE envelope) to a maximum of 5000 CLM segments. While the implementation guide sets no specific limit to the number of Patient Hierarchical Level loops, there is an implied maximum of 5000.

Example: HL*3*2*23*0~
