

# Outsourcing, Contracting and Pricing Issues for Employers, Plans and Providers

Pricing Strategy Discussion

September 13, 2006

NAVIGANT  
CONSULTING

# Pricing Presentation Objectives

Prices are in many ways part of the “glue” that binds payers, employers and providers together and is hence fundamental to how we relate to one another.

- Define industry-wide pricing issues/problems
- Define the implications for payers and providers
- Define accelerators to more defensible, value-oriented and even margin enhancing prices and rates

# Pricing Issues/Problems

International Perspective  
Domestic Perspective

# The Prices We Pay

Given their relative magnitudes, some prices matter more than others.

# International Comparison

Given international comparisons, some prices warrant particular attention.

**“It’s the Prices, Stupid!”<sup>1</sup>**

# International Comparison (continued)

## Observations

- Relative to 30 other countries, U.S.'s per capita health spending is not driven by different use rates, service mix intensity or excess capacity
- Rather, it's the **PRICES** that make U.S. expenditures/capita 2+ times other countries
  - Inpatient price/day
  - Pharmaceutical prices
  - Physician prices
  - Outpatient facility service prices
- **Outpatient/capita** spending (including physicians) is 3x of OECD median, yet U.S. OP visits/capita and CT & MRI machines/capita are not far from OECD medians

# Pricing Becoming Top of Mind Issue

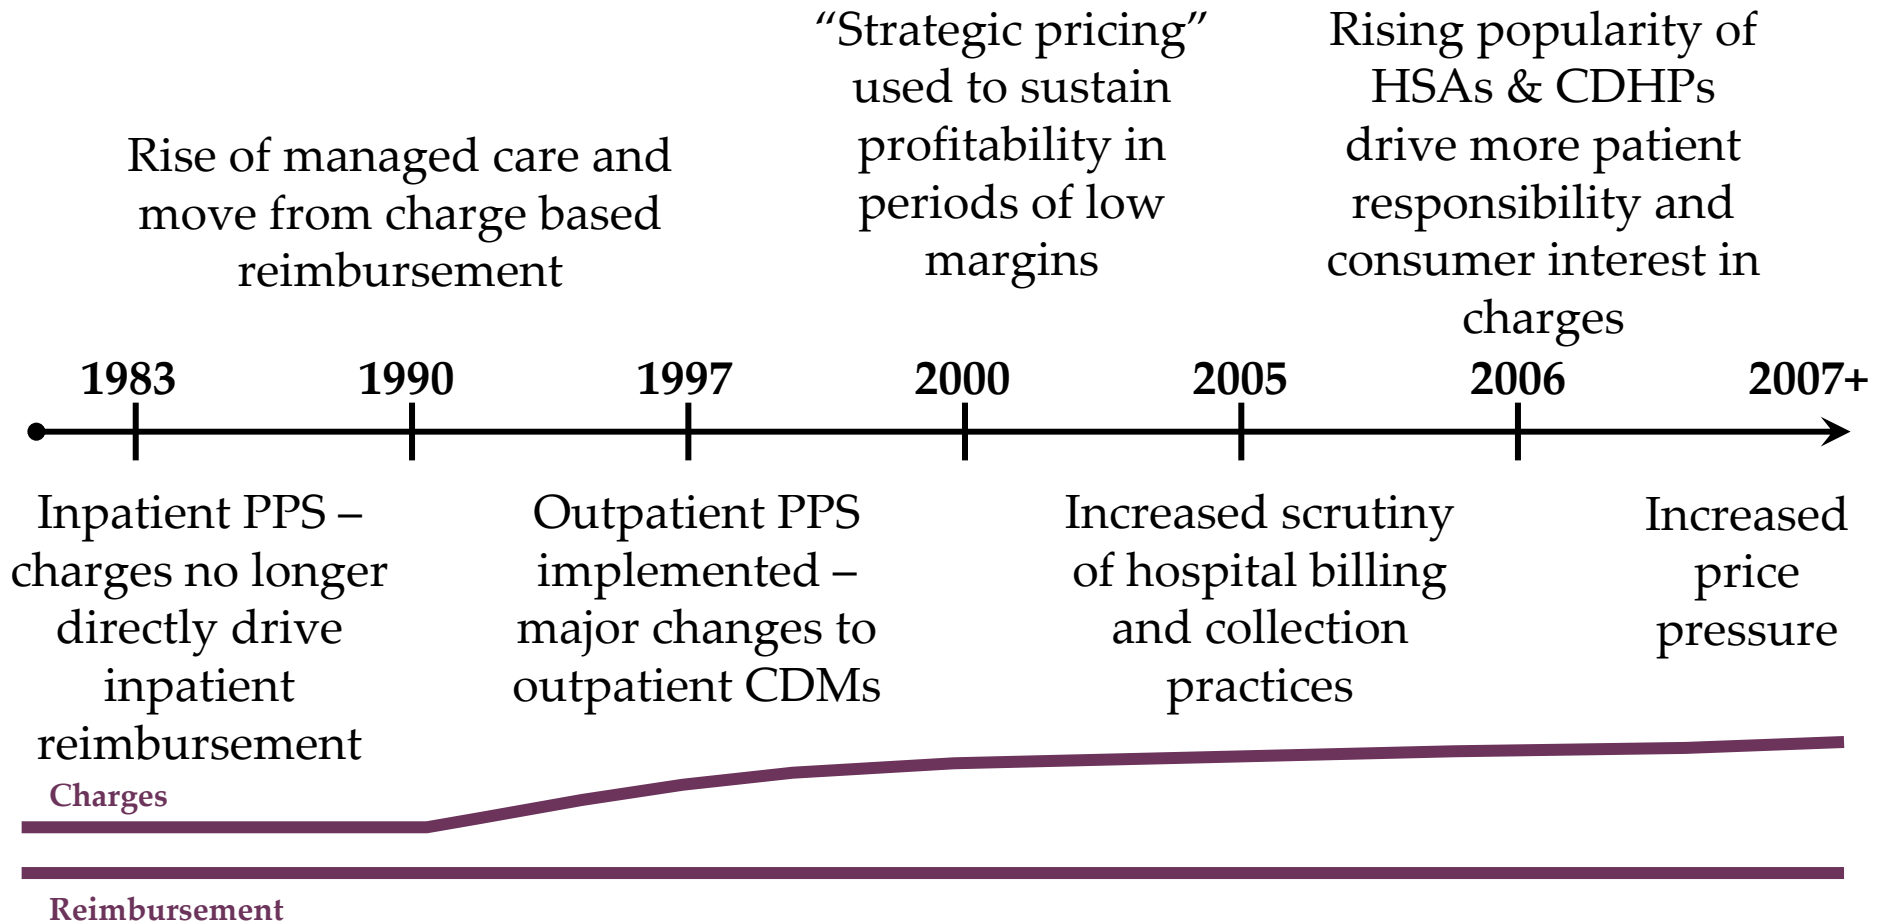

Other factors are accelerating downward pricing pressure.

FEDERAL TRADE COMMISSION

# Pricing - How Did We Get Here?

# Assertion 1: Pricing Issue Will Intensify

Unsustainable trends, by definition, must come to an end.

## Cost Shifting and Hospital Payment to Cost Ratios

Source: The Lewin Group analysis of American Hospital Association Annual Survey data, 1981 – 2004, for community hospitals

<sup>(1)</sup> Includes Medicaid Disproportionate Share payments

## Assertion 2: Reflect on the Levers We Control

How can reimbursement approaches (that we control) encourage the right investments rather than promote more cost shifting?

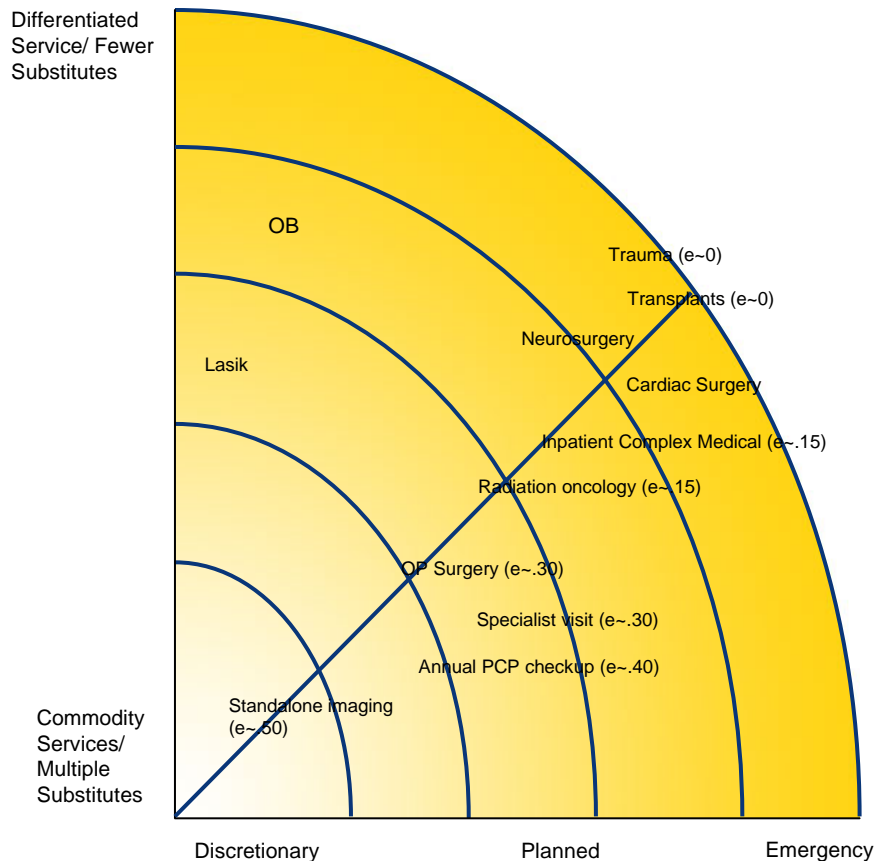

### Upside Down Economics

Service	Assumed Core Competencies	Level of Competition	Typical Hospital Positioning	Typical Hospital Reimbursement/ Profitability
Standard Outpatient Imaging and Therapy	<ul style="list-style-type: none"> <li>Price</li> <li>Proximity</li> <li>Convenience</li> </ul>	High	Poor	High
Planned Surgery (IP and OP)	<ul style="list-style-type: none"> <li>The Surgeon</li> <li>Volume/scale</li> <li>Nursing Expertise</li> </ul>	Moderate	Poor-Moderate (depends on CON)	High
Inpatient Medicine	<ul style="list-style-type: none"> <li>Acute treatment</li> <li>ALOS management</li> </ul>	Low	Strong	Low
Mission-Oriented Services	<ul style="list-style-type: none"> <li>Volume/scale</li> <li>24 Hr Orientation</li> <li>Full Service Orientation</li> </ul>	Very Low	Very Strong	Low to Medium

# Payer/Provider Implications

# Payer Implications – Get the Incentives Right

## Service/Patient Segmentation

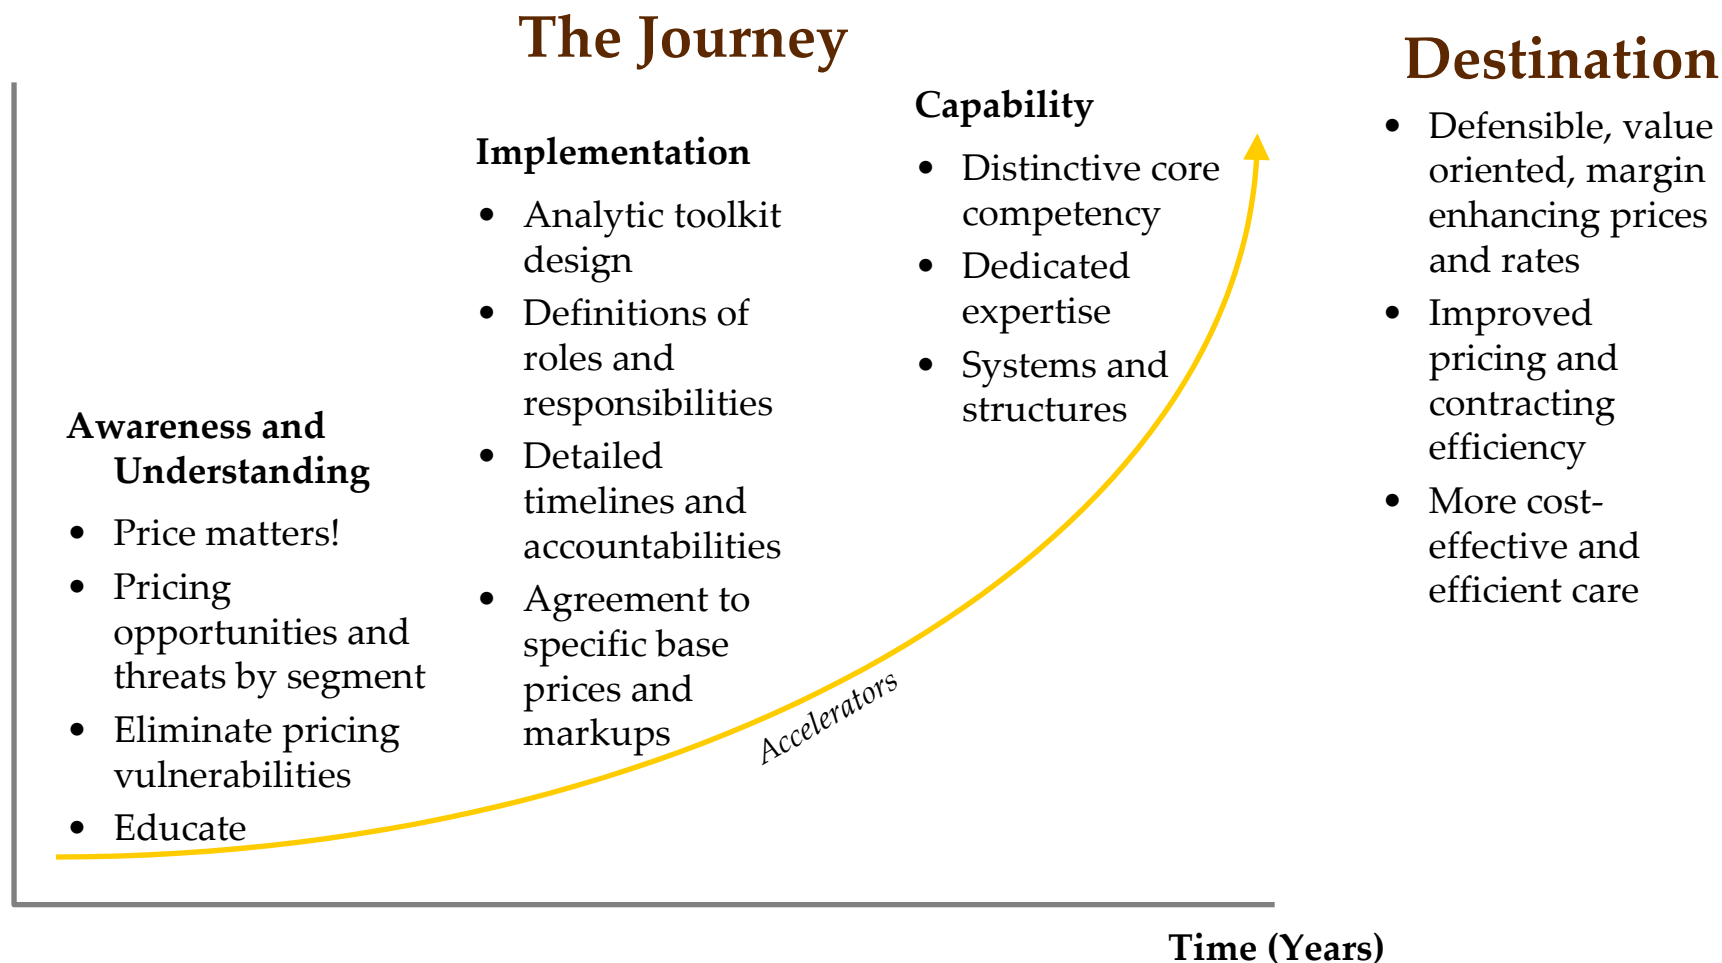

## Action Items

- Payers should segment medical expenses by service acuity and patient price sensitivity
- Evaluate benefit design, network design and provider reimbursement strategy by segment
  - What's our reimbursement strategy for commodity ambulatory services?
  - Where do payment rates need to increase (e.g., HIT, chronic care)?
  - Zero sum vs. positive sum
- Beware of blunt instruments which ignore patient and service segments (e.g., HDHP, tiered networks)
- Influence provider's clinical and capital decision making to ensure more cost effective and efficient care

# Provider Implications – Pricing (and Contracting) Journey

Providers can likewise commit to a multi-year initiative to achieve defensible, value-oriented and margin enhancing prices and rates.

# Key Accelerators

Several 'accelerators' can expedite progress toward more defensible, value oriented and even margin enhancing prices/rates – as well as more cost-effective, efficient care.

1. Evaluate your market/portfolio
2. Internal/external education, consensus and communications plan
3. Standard pricing formula/methodology
4. Pricing and contracting toolkit
5. New roles/responsibilities
6. Implement solution for a segment of the organization

# Accelerator #1: Evaluate Your Market/Portfolio

Health systems operate multiple businesses, making this analysis all the more important.

1. Less competitive market segment; longer term/strategic perspective
  - Play defense; reduce risk of public scrutiny of prices
  - Defensible pricing engagement
2. Shorter term/budget oriented perspective, regardless of market dynamics
  - Increase specific prices/rates to help offset budget shortfalls or opportunistically improve financial position
  - CDM price optimization and short term contracting tactics
3. Competitive, retail oriented market segment and longer term/strategic perspective
  - Incorporate price into a multi-year strategy to grow/defend market share, dependant on the type of service: commodity or proprietary
  - “Pricing transparency strategy” or “retail pricing and contracting strategy”

# How Hospitals are Responding

## Option #1: Wait and See Approach

- Stick to **traditional pricing techniques**
  - Multiple of Medicare
  - Across the board charge master increases
  - Avoid the \$100 aspirin
  - Pricing is the last step in the budgeting process (rather than one of the first)
- Ignores inevitability of more price based competition/downward pricing pressure for commodity services
  - Continued investments in bells and whistles

# How Hospitals are Responding (continued)

## **Option #2: Defensible Pricing Approach** **Common Activities**

- Board and senior management education sessions on state of pricing
- Updated billing and collections policies (including charity care)
- Standardized CDM with key price and compliance vulnerabilities resolved
- Updated cost accounting policies/procedures
- Standard defensible pricing formula/methodology

## **Common Mistakes**

- “Magic bullet” software – only focus on CDM prices
- Ignore contracted rates and out of pockets
- Hastily posting prices (with no other data to demonstrate value for price)
- Pursuing an across the board ambulatory price decrease without a clear sense of cost structure, patient price sensitivity or breakeven volumes

# How Hospitals are Responding (continued)

## Option #3: Price to Value Approach

- Focuses on creating/demonstrating **value** for the **price** and **rate** to payers, patients
  - Defensible prices/rates by segment
  - Margin enhancing prices/rates by segment
- Requires strategic assessment of **price vs. value relationship** as part of a broader portfolio reconfiguration, price transparency or pricing/contracting strategy
- Forces a more deliberate discussion of how volume, service mix, cost reductions, capital investments, prices and rates will achieve annual budget targets by segment
- May entail **higher reimbursement for proprietary services and lower reimbursement for commodity services** while eliminating costs
- Can uncover new ways to use price to enhance margins, including peak pricing

Key Issue: How Will Payers Respond?

# Provider/Payer Win-Win: Value Oriented Pricing

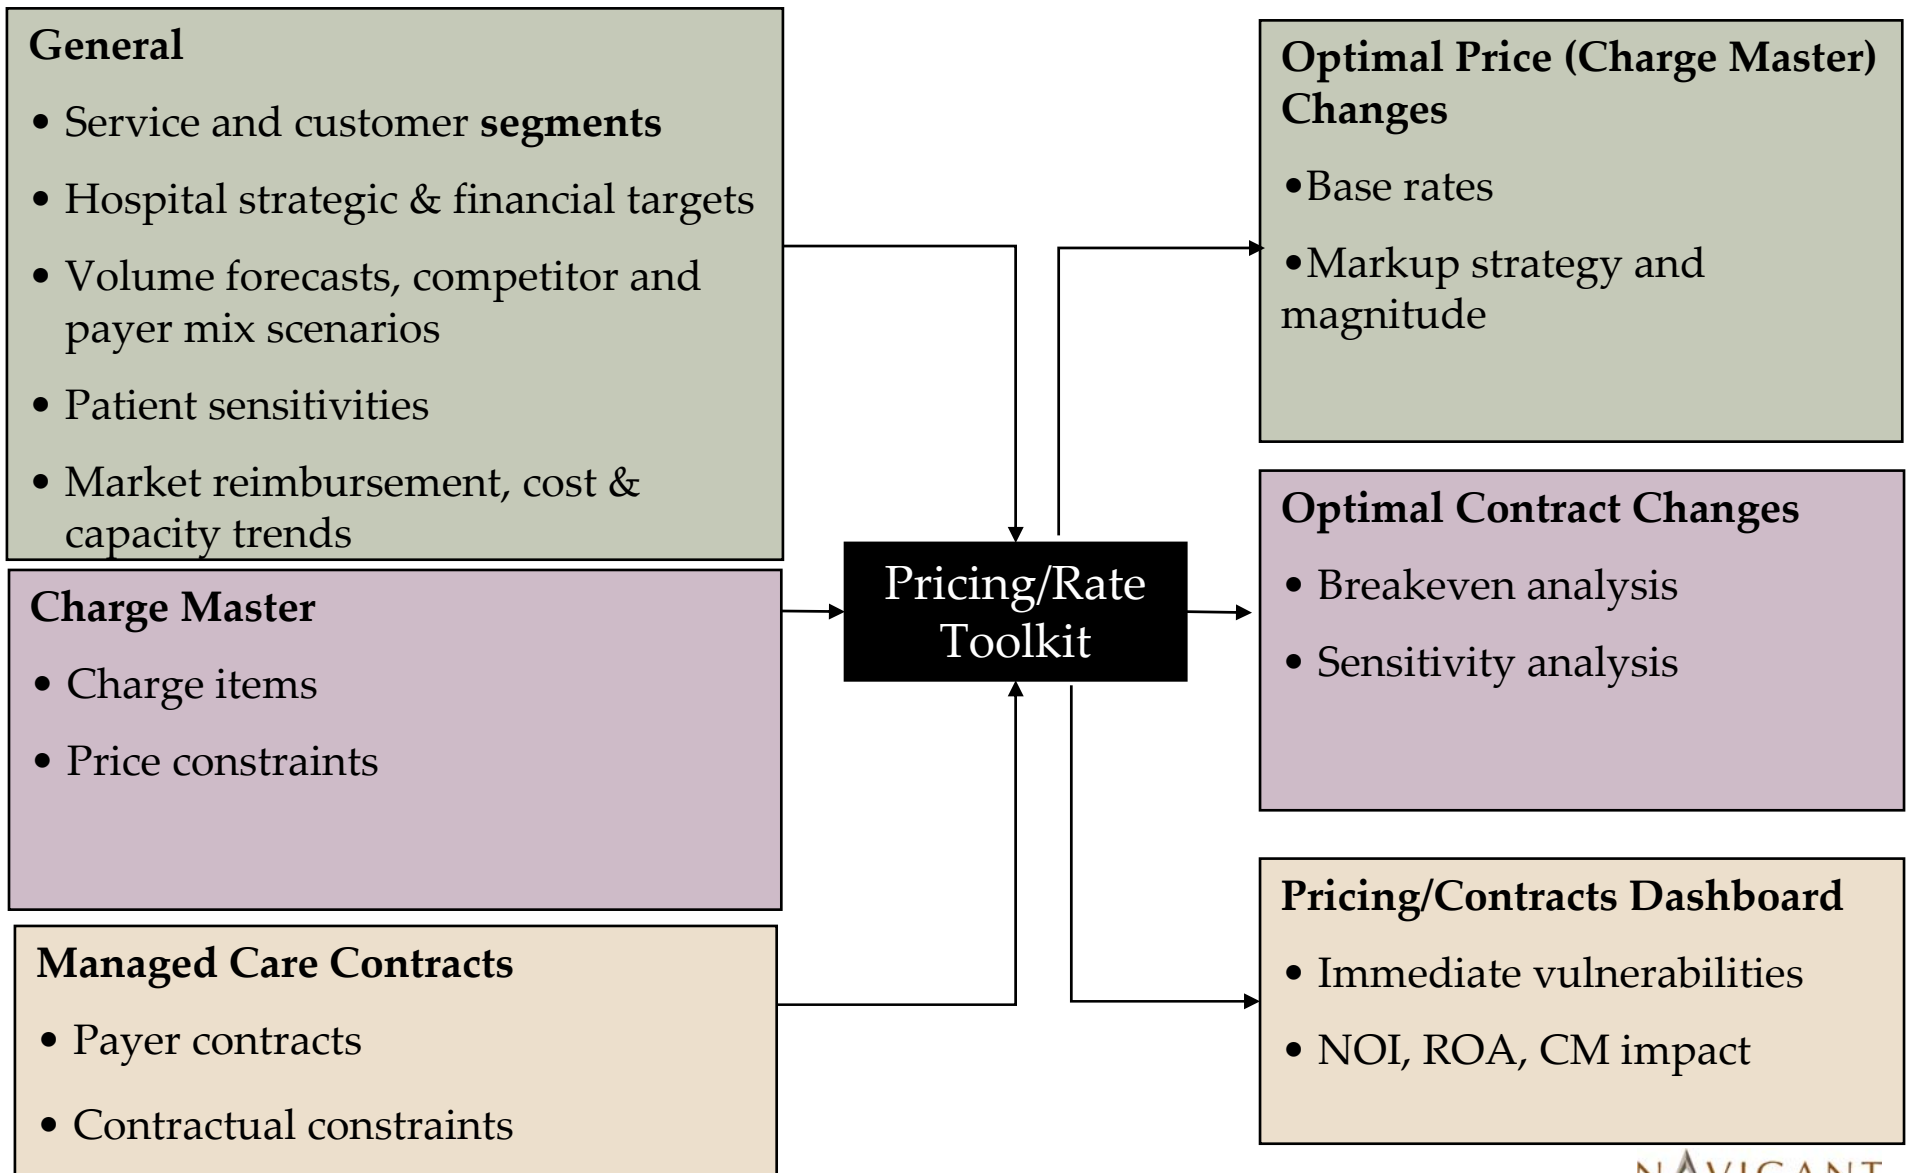

## Peak Pricing Example

- Hospital's asset productivity varies greatly depending on machine and time of week (e.g., imaging and operating suites are typically empty on weekends, but overrun early in the week)
- Hospitals beginning to integrate scheduling and financial systems to offer peak and off-peak price differentials to better match supply and demand (and forego unnecessary capital investments)

No Peak Pricing	Peak Pricing
Higher prices sustained, but: New competitors enter Duplicative capital investments Lower asset productivity Lower margins	Lower prices on average, so: Less attractive market entry Higher volume for incumbent hospital Less excess capital investments Greater asset productivity and margins

- Peak pricers view long-term capital costs as avoidable rather than fixed and anticipate a competitor's downstream reactions to the initial pricing decision.
- That is, these organizations integrate pricing and capital investment decisions to make both decisions more strategically

# Accelerator #4: Provider/Payer Toolkit

# Summary: Strategic Price and Rate Management Process

Although this process reflects the provider's perspective, many payers should re-evaluate their processes.

1. Establish the organization's pricing/contracting intent
  2. Define actionable customer segments
  3. Segment services across service lines
  4. Compile a market intelligence fact base
  5. Understand pricing alternatives
  6. Define price ranges for services
  7. Model revenue and margin scenarios across the contractual portfolio
  8. Prepare/conduct the negotiation with target payors
  9. Organize to market/communicate value
- Competitive Positioning
- Pricing Science
- Contracting Strategy
- Management
