

# **Hospitals and Health Systems: Case Studies on Implementation of Large-Scale Systems**

HIT Summit

October 22, 2004

**Robert M. Kolodner, M.D.**  
**Acting Chief Health Informatics Officer, VHA &**  
**Acting Deputy CIO**  
**Department of Veterans Affairs**

# A Brief Agenda

- **Setting the Stage**

- Veterans Health Administration context

- **VistA: VA's Current Health Information System (HIS)**

- CPRS: The clinician interface to the Electronic Health Records (EHR)

- **VA's Large Scale Implementation Experience**

- Processes honed and repeated over 20+ years

- CPRS as an example – phased implementation

- 4-step process

- Critical ingredients

- Clinician involvement – before, during, after deployment

- Continued application evolution

- **Extent and Impact of Use Achieved**

- Clinical Impact – the *Raison D'Etire* for Health IT

- **HealthVet: VA's Next Generation HIS & EHR**

# 2004: Who is “VA”?

## Veterans Health Administration

- **VHA is an Agency of the Department of Veterans Affairs**
- **Locations & Affiliations**
  - **~ 1,300 Sites-of-Care**
    - Including 157 medical centers, ~ 850 clinics, long-term care, domiciliaries, home-care programs
  - **Affiliations with 107 Academic Health Systems**
    - Additional 25,000 affiliated MD's
    - Almost 80,000 trainees each year
    - 60% (70% MDs) US health professionals have some training in VA

# 2004: Who is “VA”?

## Veterans Health Administration

### • Budget, Staff, & Patients

~193,000 Employees (~15,000 Doctors, 56,000 Nurses, 33,000 AHP)

- *6% decrease since 1995*
  - 13,000 fewer employees than 1995

~ \$27.4 Billion budget

- *42% increase since 1995*
  - Flat at ~ \$19B from 1995 - 1999

– 5.1 million patients, ~ 7.5 million enrollees

- *104% increase in patients treated since 1995*
  - From 2.5 million patients / enrollees in 1995

# Who Are VA Patients ?

- **Older**

- 49% over age 65

- **Sicker**

- Compared to Age-Matched Americans
  - 3 Additional Non-Mental Health Diagnoses
  - 1 Additional Mental Health Diagnosis

- **Poorer**

- ~ 70% with annual incomes < \$26,000
- ~ 40% with annual incomes < 16,000

- **Changing Demographics**

- 4.5% female overall
  - Females: 22.5% of outpatients less than 50 years of age

# Safety is Not Enough

- **Patients don't seek care just to be safe, Safety is Fundamental**
  - **Goal: Avoid Getting It Wrong**
- **Safety & Effectiveness, To Close to Chasm**
  - Expect effectiveness in maintaining & improving health, managing disease & distress
  - **Goal: Getting It Right . . . Consistently**
- **Patient-Centered, Coordinated Care**
  - Patient is locus of control
  - Seamless across environments
  - Integrates disease-specific, general health and social needs
  - Anticipates health trajectory and modifies risks, even before traditional risk factors manifest
  - **Goal: Care that is safe, effective & predictive and delivered in the time, place & manner that the patient prefers**
- **Information Technologies & Care Coordination in Supporting These Goals**

An iceberg floating in the ocean. The tip of the iceberg is visible above the water, while the much larger part of the iceberg is submerged below the surface. This visual metaphor represents the concept of 'The Quality Chasm', where the visible tip is the current state of safety and effectiveness, and the submerged part represents the significant gap in patient care quality.

*To Err is Human:*  
98,000 Patients

*The Quality Chasm:*  
Every Patient

“Crossing the Quality Chasm” 2001: IOM

The logo features the word "VistA" in a white, elegant script font, centered within a large, dark blue oval. The oval has a subtle gradient and a dark blue border. The background of the slide is white, with dark blue decorative elements at the top and bottom.

*VistA*

- **VistA is a success**

- Built by “fire” of VHA collaboration
- Publicly owned by VA; plan to remain so for the next generation system
- Strong interest by public/private in using VistA

- **National software w/ local flexibility/innovation:**

- Innovation developed locally & enterprise wide
- Standard packages distributed enterprise wide, e.g. latest version of CPRS

- **Initial system (1983-1996) was built around “dumb terminals”**

- “Decentralized Hospital Computer Program (DHCP)”
- Steady deployment of packages and enhancements
- Applications separated out by Hospital/Clinic “Service”
- Simple “roll-and-scroll” screens

<b>TEST, CHRIS</b> 000-00-5436 May 21, 1956 (43)	<b>Visit Not Selected</b> Provider: VOLPP, BRYAN D MD	Primary Care Team Unassigned	CIRN Data		Postings <b>A</b>

- **CPRS evolved from DHCP's text-based Order Entry/Results Reporting**

- Initial design and subsequent enhancements guided by physicians and other direct health care providers
- “Visually” organizes and presents all relevant data on a patient in a way that easily supports clinical decision making

- **Phased implementation of CPRS**

- Placed in “production” at first VA site in July 1996
- Began use at 3 more sites between August and December 1997
- Installed in “lead” site in each of VA's 22 regions by June 1998
- Implementation completed at all VA Medical Centers (>170) in December 1999

**“Try, fail.  
Try, fail.  
Try, succeed, deploy.”**

***William W. Stead, M.D.***

*Associate Vice Chancellor for Health Affairs &  
Professor of Medicine and Biomedical Informatics  
Vanderbilt University*

## Using CPRS as an example...

- **Step 1: Software application planning and design**

- Involved diverse group of providers to determine critical features and prioritize minimum set for Version 1
- Iterative development with periodic reviews by these Subject Matter Experts
- More recently made pre-release software available for testing/use/feedback by end users attending national VA IT meetings
- Identify Implementation Manager for national roll-out

## • Step 2: Install at 1<sup>st</sup> Site – Alpha site

- Small number of users (early adopters) at a single site
  - Supported by relatively high number of national implementation staff and application developers as well as local support staff
  - Install and run in a “mirrored” test system on site, then move to “production”
  - Apply new configurations that tailor the new application to clinical needs and to improve response time
  - Rapid turn-around of minor software code changes
- Expand the users and identify additional configurations necessary to support broader user base (new clinical settings and wider level of user expertise)
- Goal of steady increase in basic use of the software
  - Log on and use of data retrieval capabilities
  - Entry of some simple, structured information
  - Some more demanding features (text entry) may be available but used only by a few clinicians

- **Step 3a: Implement at 2<sup>nd</sup> site – 1<sup>st</sup> Beta site**

- Lower level of extra support than at alpha site
  - Code changes limited only to “bug” fixes and “show stoppers” identified at this 2<sup>nd</sup> site
- Confirm configurations and strategies
- Identify differences (variations or additional configurations needed) from initial site
- Test out training materials and methods
  - Refine based on results

- **Step 3b: Implement at 1-3 more Beta sites**

- Progressively less extra support and more use of standard training methods

- **Step 4: Draw up and follow timetable for progressive national roll-out**
  - Several models used for different applications:
    - Establish a lead site in each “region” (VISN)
      - Train regional staff as “experts” in the application implementation & configuration
      - Launch separate, parallel installation activities in each region, using the lead site staff to support the newer sites in their region
    - Implement groups of sites across the country together in “waves”
    - Release software, training material with a target completion date and have every site implement on its own schedule

## • The “Secret” Ingredients

- Leverage VA model of “Super users” and Clinical Application Coordinators (CACs)
- Initial implementation of major new applications often requires
  - Intense individual training
  - Round-the-clock, on site support at each local facility
- Conduct national support calls involving the CACs, the National Implementation Manager, and, occasionally, the developers
- Multi-tiered user support
  - Users to the facility Super Users and CACs
  - CACs to the local IT staff
  - Informal networking among CACs with their peers via email/messaging systems
  - Local IT staff and CACs to the national help desk
  - National help desk to the developers

**• None of this can happen without management support and a show of solidarity during implementation.**

**“If you give me what I tell you I want, then I’ll tell you what I really want (and actually need).”**

***It’s NOT “scope creep;” it’s actually part of the process of refining what will work in a clinical setting.***

***Usability testing with a plan for iterative cycles of design need to be built into the plan.***

## VA Clinicians guided further rapid enhancements

### 1997

- **Began “Camp CPRS” is an annual conference & training session**
  - **Designed to prepare VISN CPRS Key Site personnel for VistA CPRS**
  - Five attendees from each CPRS Key Site.
    - 1 Key Site Project Manager
    - 1 Clinical Champion
    - 1 Clinical Application Coordinator
    - 1 IT Support Person
    - 1 Pharmacist

### 2000

- **CPRS GUI Version 14 Graphical User Interface improved accessibility to online clinical information and results via integration with:**
  - **Enhanced online ordering capabilities**
  - Display of related textual and graphical clinical images simultaneously
  - **Provided access to clinical information from other VAMC sites through Health Summaries via Remote Data Views**

## 2001

- **VISTA Imaging V. 2.5 workstation software synchronizes with CPRS**
- **Images and scanned documents are captured and attached to progress notes (DICOM-standard)**
- **CPRS GUI Version 16 Released enhanced “Remote Data View” functionality for CPRS users to more easily view consolidated data from multiple VHA facilities across the country**

## 2002

- **Federal Health Information Exchange (FHIE) provides the first-ever interagency system with transfer of clinical data from DoD to VA on service members at the time of their separation**

## 2004

- **“Camp CPRS” renamed to VistA eHealth University – “VeHU”**
  - Over 175 Sessions (60 Hands-On) on clinical software functionality
  - Over 1,450 physicians, nurses, pharmacists, clinical informatics support personnel and health information managers attended

## • Supporting the Clinical-Technical Interface

- Role of 24/7 “Clinically Savvy” support
- Tracking Tools to report errors and desired enhancements
- Simplicity of using a closed system as a test bed
- National work groups are mirrored locally and ensure clinical participation in future development
- House staff become the critical mass to get everyone on board – keyboard/mouse is their primary method for data entry in all other parts of their lives

# Where are we Now!!

**Every VA Medical Center has Electronic Health Records !**

**100% VA Medical Centers have Electronic Health Record**

**CPOE is one of the Leapfrog Group's "Top 3 Safety Strategies"**

Psychogenic Headache  
 Calculus of Kidney (icd-9-Cm 592.0)  
 \*Agitation  
 Cytomegalovirus Infection  
 Hypomagnesemia  
 Emphysema Nec  
 R. Bite  
 Missions

Furosemide  
 Penicillin  
 Bee Sting  
 Sulfonamide/Related Antimicrobials

Allergies  
 Allergies

- Outside of VA, CPOE < 8% nationally
- ≤ 30% among Academic Medical Centers
- Nationally, 93% of all VA Rx's by CPOE
- Ultimate Goal: 100%
- VA is the Benchmark for CPOE

Clinical Reminders

Reminder	Due Date
Alcohol Abuse Screening (CAGE)	Apr 01,00
Diabetes - Urine Protein	Jan 05,00
Diabetes - Urine Microalbumin	Jan 05,00

- **Number of Documents**

(Progress Notes, Discharge Summaries, Reports)

– 533,000,000 / >510,000

- **Number of orders**

– 1.14 Billion / >860,000

- **Number of Images**

– 197,000,000 / ~340,000

- **Number of Medications Administered with BCMA**

– 500,000,000 / >580,000

# Chart Metaphor, Linking Text and Images

Vista

The screenshot displays the VISTA medical software interface, illustrating a chart metaphor that links text and images. The main window, titled "VISTA Imaging Display : MADTL,F F (Vista)", shows patient information for MADTL,F F (DOB: 1924, age: 75, SSN: 500-50-5000, SC: type: NON-VETERAN (OTHER)). It lists 6 images and shows a list of radiology exams:

#	Day-Case	Procedure	Exam Date
1	113098-35	CHEST SINGLE VIEW	1998 - 11/30
2	113098-34	ABDOMEN 1 VIEW	1998 - 11/30
3	072897-30	CHEST SINGLE VIEW	1997 - 07/28
4	072787-22	ANGIO VISCERAL SELECT CB	1997 - 07/27

Below the radiology exams, the "Abstracts loaded" section shows a list of abstracts with thumbnails and titles:

- 1 COLON 7/28/97 COL 07/28/1997
- 2 X-RAY CHEST SINGLE GEN. MED. 07/28/1997
- 3 072797-22 ANGIO VIS XRAY 07/27/1997 -Group
- 4 072797-21 GASTROINT XRAY 07/27/1997 -Group
- 5 SIGMOID COLON DIVER COL 12/24/1992 -Group
- 6 BLEEDING SCAN FOR P GEN. MED. 12/24/1992

The "Problems" section lists: "Ulcerosis, Colonic" and "Hemorrhage of Gastrointestinal Tract". The "Allergies / Adverse Reactor" section lists "Penicillin" and "Allergies". The "Medications" section lists: "0.1mg Tabs Pending", "Methasone 4mg S.T. Pending", "Aspirin 500 Hctz 30mg Tab Pending", and "0.2mg Tab Pending". The "Vitals" section shows: T 98 F, P 86, R 18, BP 120/75, HT 58 in, WT 140 lb.

The "VISTA Imaging: MUSE EKG Display" window shows an EKG tracing for MADTL,F F (DOB: 500-50-5000) on 8/13/1997 at 09:45:00. The tracing is labeled "1: Resting - 8/13/1997 - 09:45:00" and shows a regular rhythm with a rate of 100 bpm. The EKG is confirmed by JOHN DOE.

# Clinical Reminders

## Contemporary Expression of Practice Guidelines

- Time & Context Sensitive
- Reduce Negative Variation
- Create Standard Data
- Acquire health data beyond care delivered in VA

**Reminder Resolution: Pneumococcal vaccine (pneumovax)**

ORDER PNEUMOCOCCAL IMMUNIZATION:

- Order for pneumococcal vaccine placed.
- Order for influenza vaccine entered.

PRIOR IMMUNIZATION:

- Patient indicated that the pneumococcal vaccine was received previously.

Date/Time: 1997 ... Location: East Orange, NJ

Comment:

REFUSAL/CONTRAINDICATION:

- Patient indicates a history of contraindication to pneumococcal vaccination.
- Pt. has an acute illness. Vaccinations will be delayed until recovery from this illness.
- Patient has a life expectancy of less than 3 months. Evaluation and treatment may be necessary at this time.
- Patient refuses pneumococcal immunization.
- Patient refuses all immunizations at this time.

Clear < Back Next > Finish Cancel

**Pneumococcal vaccine (pneumovax):**  
Patient indicated that the pneumococcal vaccine was received previously.  
Location: East Orange, NJ

Immunizations: PNEUMO-VAC (Historical)

**Links Reminder**

[www.va.gov/cprsdemo](http://www.va.gov/cprsdemo)

*Health\_e\_Vet*

- **HealtheVet-VistA is a modernization effort that includes:**
  - Systems Platform
  - Software Design
  - Development Methodology
- **Based on state-of-the-art technology**
- **Business process re-engineering**

- **Moves from facility-centric to person/data-centric**
  - Uses national, person-focused health data repository for production & management/analysis/research
- **Builds on, enhances & utilizes VistA**
  - Moves from legacy VistA to Health\_eVet-Vista
- **Uses best, appropriate modern technology**
  - Programming, software, hardware, networking
- **Standardizes the “core” applications**
  - Provides processes for local enhancements beyond the “core”
- **Standardizes data & communications**
