

# Leveraging HIT for Public Health Surveillance

Presented by:

**Edward Barthell, MD, MS**

HIT Summit

October 22, 2004

# *Edward Barthell, MD, MS*

Infinity Healthcare – Emergency physician staffing

American College of Emergency Physicians  
Frontlines of Medicine workgroup

EMSystem - ASP for diversion, mass casualty mgt,  
ED data collection and communication

National Institute of Medical Informatics  
Wisconsin Health Info Exchange

# Agenda:

Establishing a vision

Sharing data

Syndromic surveillance

Lessons

Future plans

A public-private partnership  
dedicated to driving improvement in  
the quality, safety, and cost-  
effectiveness of health care through  
information technology

## *eHI Vision :*

An interconnected, electronic health information infrastructure that benefits all stakeholders in the health care system ...

## *eHI Vision*

- Computerized patient records in every clinician's office.
- Interoperable health care systems with secure connectivity across providers, patients, payers, public health and others.

## *eHI Vision*

- Clinicians armed with the information they need to make the best clinical decisions at the right time.
- Consumers, patients and caregivers armed with the information they need to manage and address their own health care needs.

# EM Physicians and Computers

- ACEP Informatics Section
- Annual ACEP Informatics Meeting

American College of  
Emergency Physicians®

# Emergency Department of the Future

The Emergency Department of the Future

ACEP President Larry Bedard, MD, cuts the ribbon to officially open the Emergency Department of the Future as representatives of ACEP and the National Information Infrastructure-Health Information Infrastructure (NII-HIN) look on. ACEP joined with NII-HIN to launch this project, which demonstrates the potential impact of information technology on emergency medicine in the near future. The exhibit is located in booths 1346, 1348 and 1350 in the exhibit hall.

## ACEP Scientific Assembly

**New Orleans  
September 1996**

# EDOF Project

---

- Provide a strategic vision & enthusiasm among emergency physicians & the medical industry.
- Present a show case for medical products & computerized technologies.
- Provide optimism about the future of medicine.
- A place for education & learning.

# DEEDS

**Authorized reuse of DEEDS based ED data can potentially help....**

# Surveillance and Preparedness

## SARS Causes 'Mass Panic' in Beijing, Official Says

*By John Pomfret*

Washington Post Foreign Service

Thursday, May 1, 2003; 1:33 PM

**BEIJING, April 30** -- The SARS epidemic in Beijing is causing "mass panic" and is being worsened by a lack of hospital beds and trained health professionals, the new acting

### The SARS Outbreak

Worldwide

United States

• Countries with reported cases

# Rand Science and Technology Institute –

Infrastructure for successful  
preparedness must address:

- Objectives
- Capabilities
- Stakeholders
- Data Needs

**RAND**<sup>®</sup>

A nonprofit institution that helps improve policy and decisionmaking through research and analysis

# History - Barriers

---

- Inadequate systems for sharing information between clinical providers
- Inadequate sharing of information between clinical providers and other stakeholders

# Emergency Medicine

Normal  
operational  
mode =  
survival as  
priority

Many ERs are so  
overcrowded that  
gurneys back up  
into the parking lot

## The ER Crisis

10:30 P.M.: Eleven critically ill patients; four overwhelmed doctors; no specialists on call. **This emergency room could be anywhere in the U.S.**

# New motivation....

# Public Health Goal

Indianapolis Network for Patient  
Care (INPC):

Link clinical activities and public  
health activities to improve the  
population's health

# Frontlines of Medicine

- Develop a standardized approach for submission of emergency encounter data to regional centers to allow for *rapid deployment* of widespread syndromic surveillance

# Frontlines Recommendations

- Focus on real time data collection and analysis
- Best initial mechanism is systematic passive collection as a by-product of routine care of individual patients

# Methods

- Published initial paper with proposed approach and standards
- Identified experts / stakeholders
- Invited feedback, established partners
- Consensus conference April 2002

# The Frontlines of Medicine Project: A Proposal for the Standardized Communication of Emergency Department Data for Public Health Uses Including Syndromic Surveillance for Biological and Chemical Terrorism

---

**Edward N. Barthell, MD<sup>\*55</sup>**  
**William H. Cordell, MD<sup>†</sup>**  
**John C. Moorhead, MD, MS<sup>5</sup>**  
**Jonathan Handler, MD<sup>¶</sup>**  
**Craig Feied, MD<sup>¶</sup>**  
**Mark S. Smith, MD<sup>¶</sup>**  
**Dennis G. Cochrane, MD<sup>#</sup>**  
**Christopher W. Felton, MD<sup>\*\*</sup>**  
**Michael A. Collins, BS<sup>††</sup>**

---

The Frontlines of Medicine Project is a collaborative effort of emergency medicine (including emergency medical services and clinical toxicology), public health, emergency government, law enforcement, and informatics. This collaboration proposes to develop a nonproprietary, "open systems" approach for reporting emergency department patient data. The common element is a standard approach to sending messages from individual EDs to regional oversight entities that could then analyze the data received. ED encounter data could be used for various public

# Methods

- Delphi survey process via email
- Initial validation of results
  - Triage surveillance report data elements
  - Chief complaint values
- Publish resulting recommendations
- Encourage pilot testing, evaluation
- Encourage widespread deployment

# Frontlines Recommendations

- Flexibility is needed

- Focus on standardizing the message, not standardizing the data capture mechanism

## The Frontlines of Medicine Project Progress Report: Standardized Communication of Emergency Department Triage Data for Syndromic Surveillance

---

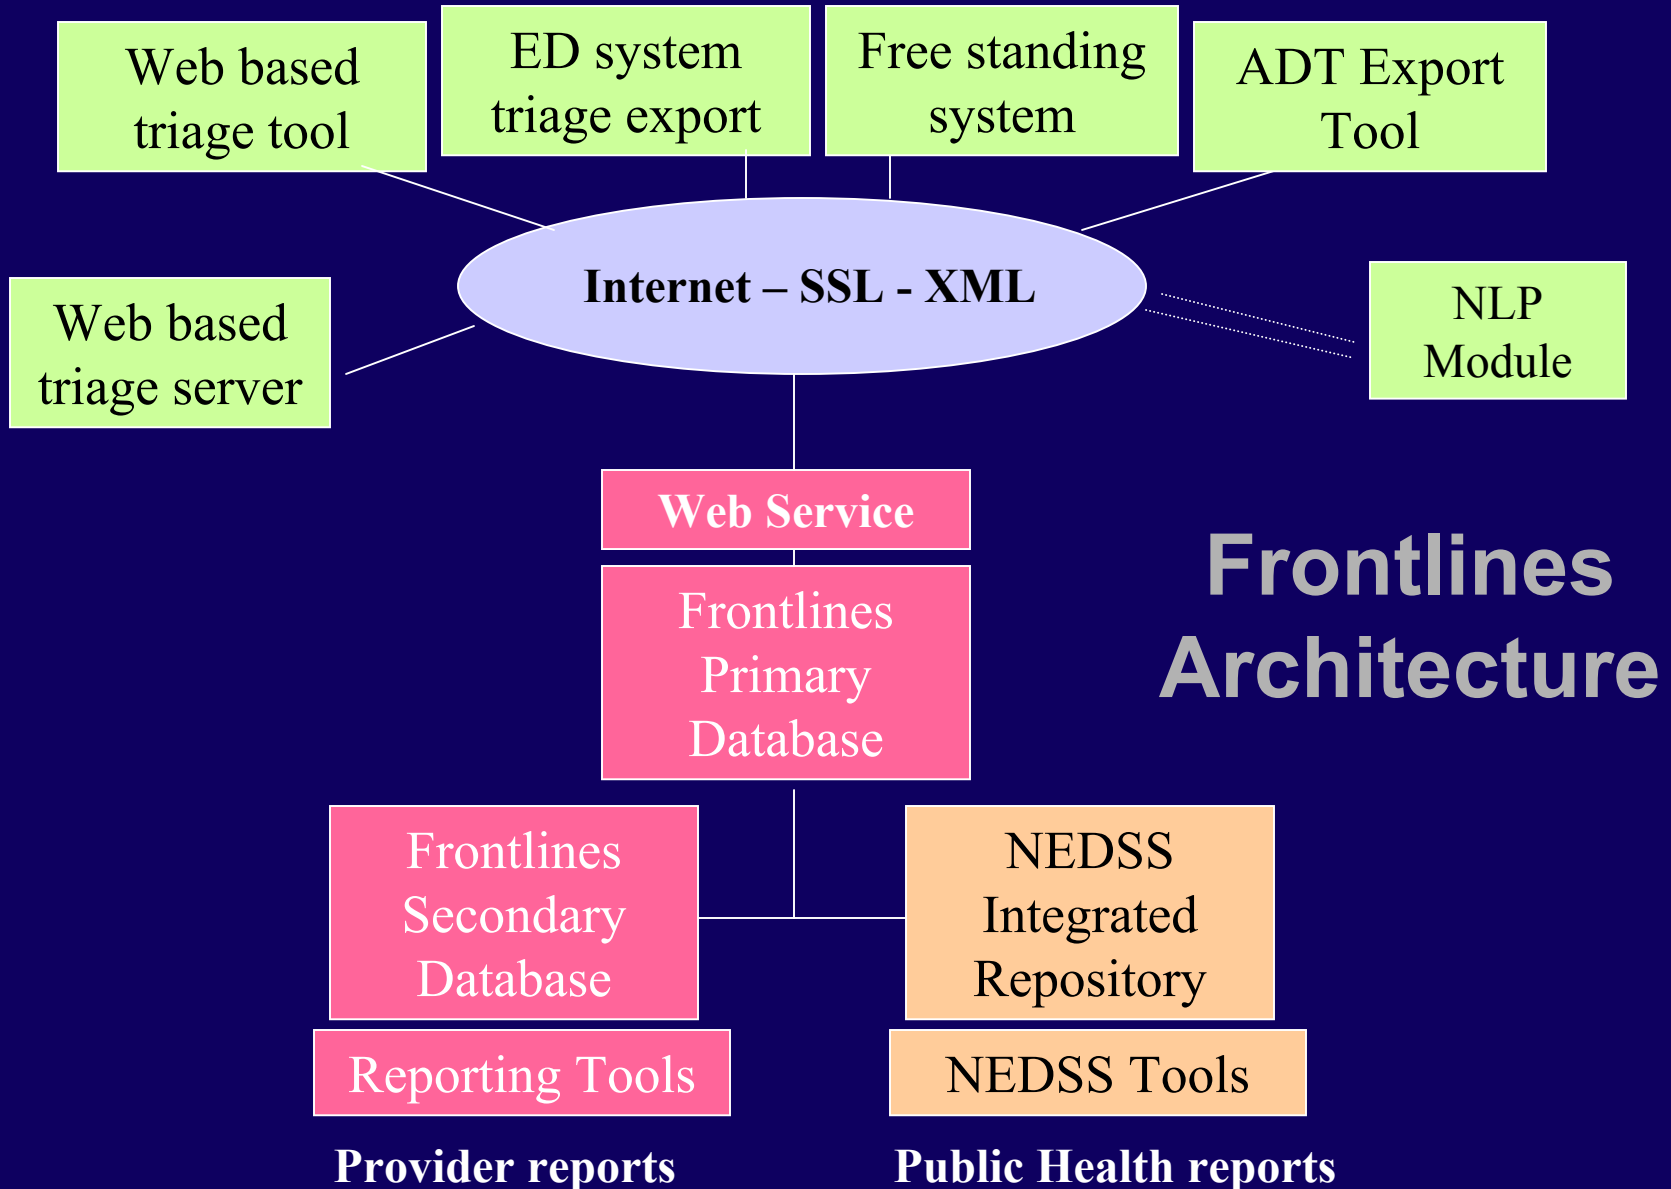

**Edward N. Barthell, MD, MS**  
**Dominik Aronsky, MD, PhD**  
**Dennis G. Cochran, MD**  
**Greg Cable, PhD**  
**Thomas Stair, MD**

*From the Department of Emergency Medicine, St. Mary's Hospital Ozaukee, Mequon, WI (Barthell); the Department of Emergency Medicine, Medical College of Wisconsin, Milwaukee, WI (Barthell); the Department of Biomedical Informatics, Vanderbilt University Medical Center, Nashville, TN (Aron-*

This article reports progress since the original publication of the Frontlines of Medicine Project. This project is a collaborative effort of emergency medicine (including emergency medical services and clinical toxicology), public health, other government agencies involved in health care and preparedness, law enforcement, and informatics to develop nonproprietary, standardized methods for reporting emergency department patient data. These data may be used for a variety of public health or clinical care initiatives, including syndromic surveillance for chemical and biological terrorism. This article reviews the outcome of the Project meeting in April 2002. Also, the article describes a Delphi Survey process to define the data elements in a triage surveillance report and to define a set of codified values for the chief complaint data element. An initial retrospective validation of the codified chief complaint values is provided, and prospective study of the proposed Frontlines' standards is encouraged.

[*Ann Emerg Med.* 2004;44:247-252.]

## Real time data capture

# Frontlines Recommendations

Scalable...

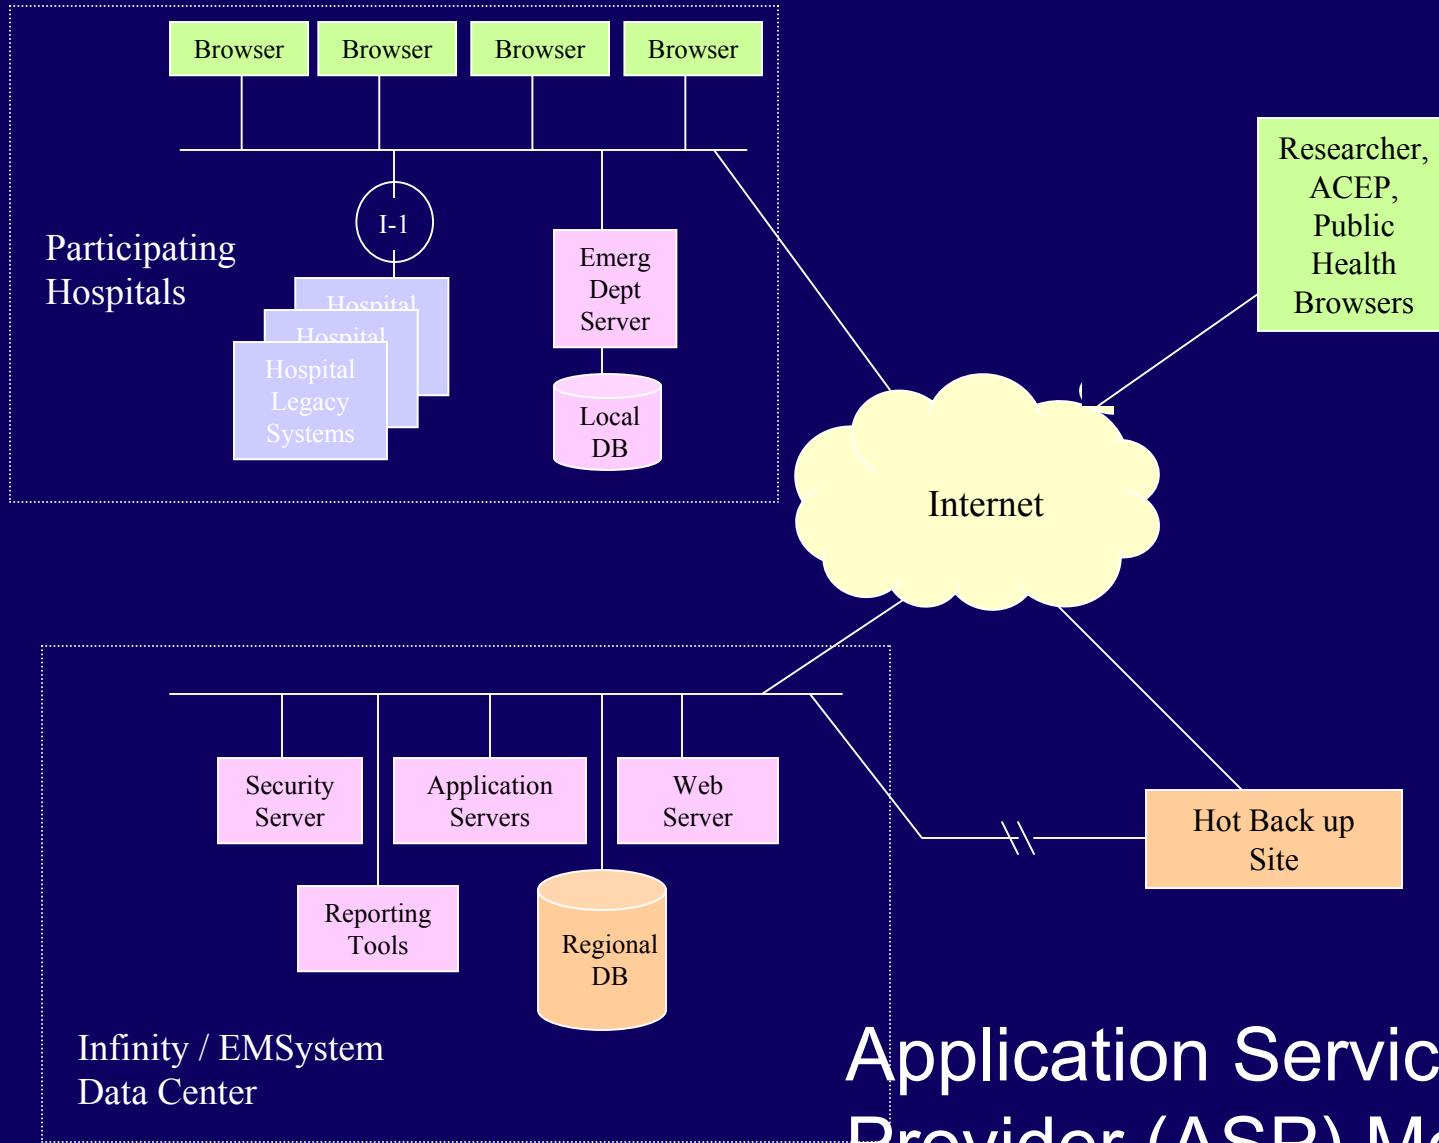

Interlinked  
regional  
surveillance  
centers

Nationwide  
surveillance

Potential  
international  
applications

# EMSystem

- **All area hospital emergency departments linked via internet**
- **Hospital diversion information**
- **Mass casualty management**
- **Emergency visit registry to support public health**

# Application Service Provider (ASP) Model

# BIOTERRORISM SYNDROMES

If you suspect disease from a potential bioterrorism event, call your local Public Health Office IMMEDIATELY:

your local Public Health Office will arrange for specialized lab testing; guidelines for treatment, prophylaxis, and infection control; and activate local, state, and federal emergency response systems.

Syndrome	Bioterrorist threat disease description	Differential diagnosis	Picture	Initial laboratory & other diagnostic test results	Immediate public health & infection control actions
<b>Acute Respiratory Distress with Fever</b>	<b>Inhalational Anthrax</b> Abrupt onset of fever, chest pain, respiratory distress without radiographic findings of pneumonia, no history of trauma or chronic disease, progression to shock and death within 24-36 hours.	Dilated aortic aneurysm, pulmonary embolism, influenza		Chest x-ray with widened mediastinum; gram-positive bacilli in sputum or blood; definitive testing available at the your local Public Health Laboratory.	Call your local laboratory. No person-to-person transmission. Infection control: none.
	<b>Pneumonic Plague</b> Apparent severe community-acquired pneumonia but with hemoptysis, cyanosis, gastrointestinal symptoms, shock.	Community-acquired pneumonia, Histoplasma capsulatum, meningococci, rickettsiosis, influenza		Gram-negative bacilli or coccobacilli in sputum, blood or lymph node; satellite appearance with Wright or Giemsa stain; definitive testing available at the your local Public Health Laboratory.	Call hospital local Public Health Office; close contact with patient; interview/observe patient; Alert Laboratory. Infection control: none.
	<b>Ricin (aerosolized)</b> Acute onset of fever, chest pain and cough, progressing to respiratory distress and hypoxemia; not improved with antibiotics; death in 36-72 hours.	Flu, Q fever, streptococcal pharyngitis, meningitis, influenza		Chest x-ray with pulmonary edema. Consult with your local Public Health office regarding specimen collection and diagnostic testing procedures.	Call your local laboratory. Infection control: none.
	<b>Staphylococcal Enterotoxin B</b> Acute onset of fever, chills, headache, nonproductive cough and myalgia (influenza-like illness) with a NC9500AL chest x-ray.	Influenza, adenovirus, mycoplasma		Primarily clinical diagnosis. Consult with your local Public Health office regarding specimen collection and diagnostic testing procedures.	Call your local laboratory. Infection control: none.
<b>Acute Rash with Fever</b>	<b>Smallpox</b> Papular rash with fever that begins on the face and extremities and uniformly progresses to vesicles and pustules; headache, vomiting, back pain, and delirium common.	Varicella, disseminated herpes zoster, scarlet fever, monkeypox, cowpox		Clinical with laboratory confirmation; vaccinated, gown and gloved person obtains specimen (scabs or swabs of vesicular or pustular fluid). Call your local Public Health office immediately before obtaining specimen; definitive testing available through CDC.	Call hospital local Public Health Office. Ask family to stay home; patient to stay home; phone number information. Infection control: contact precautions in addition to standard precautions.
	<b>Viral Hemorrhagic Fever (e.g., Ebola)</b> Fever with mucous membrane bleeding, petechiae, thrombocytopenia and hypotension in a patient without underlying malignancy.	Meningococci, malaria, typhus, leptospirosis, borreliosis, Francisella tularensis, toxic shock syndrome (TSS), hemolytic uremic syndrome (HUS)		Definitive testing available through your local Public Health Laboratory network; call your local Public Health office immediately.	Call hospital infection control and your local Public Health office immediately. Ask family members/close contacts of patient to stay at the hospital if they present for public health interview and follow-up; get detailed address and phone number information. Infection control: contact precautions in addition to standard precautions.
	<b>Botulism</b> Acute bilateral descending flaccid	Gulfian-Botani syndrome		CSF protein normal; EMG with repetitive	Request botulinum antitoxin from your local

Regarding recognition of bioterrorism syndromes.

### SARS Surveillance1

Please input the daily surveillance data collected for your facility during the 24 hour period from 00:00 until 23:59 on the date noted. Questions 1-3 below correspond to totals from Questions 1-3 on the ED Surveillance Form.

**\*\* indicates the information is required.**

Total Question 1: # of visits with fever\*\* :

Total Question 2A: # of visits with fever and respiratory complaints\*\* :

Total Question 2B: # of visits with fever and resp. complaints and pulse ox <95%\*\* :

Total Question 3: # of patients meeting travel or contact criteria\*\* :

Date for which this data was collected (date of triage)\*\* :

Total # of visits to ED on this date\*\* :

Comment:

# Severe Acute Respiratory Syndrome (SARS) Surveillance Project Report

April 30, 2003

Number of Participants = 11

# SARS Surveillance – Lessons Learned

- **Experience makes a difference -**
  - Daily use of networked system**
  - Prior use of survey technique**
- **Involve local public health -**
  - Champion, esp with nurse mgrs**
  - Data oversight to pick up mistakes**
- **Ongoing feedback to clinicians**

# SARS Surveillance – Lessons Learned

- **Data collection must be part of work flow**
  - No added steps to work process**
  - No new data points**
  - No “judgment calls” for staff**
- **Staff buy-in**
- **Process must take into account both ambulatory and ambulance patients**
