

PCMH Boot Camp

Registries & HIT in the Medical Home

Presented by

Marjorie Miller

President, HealthPower Associates, Inc.

Philadelphia, PA

Director, Policy and Planning,

Ninth Street Internal Medicine

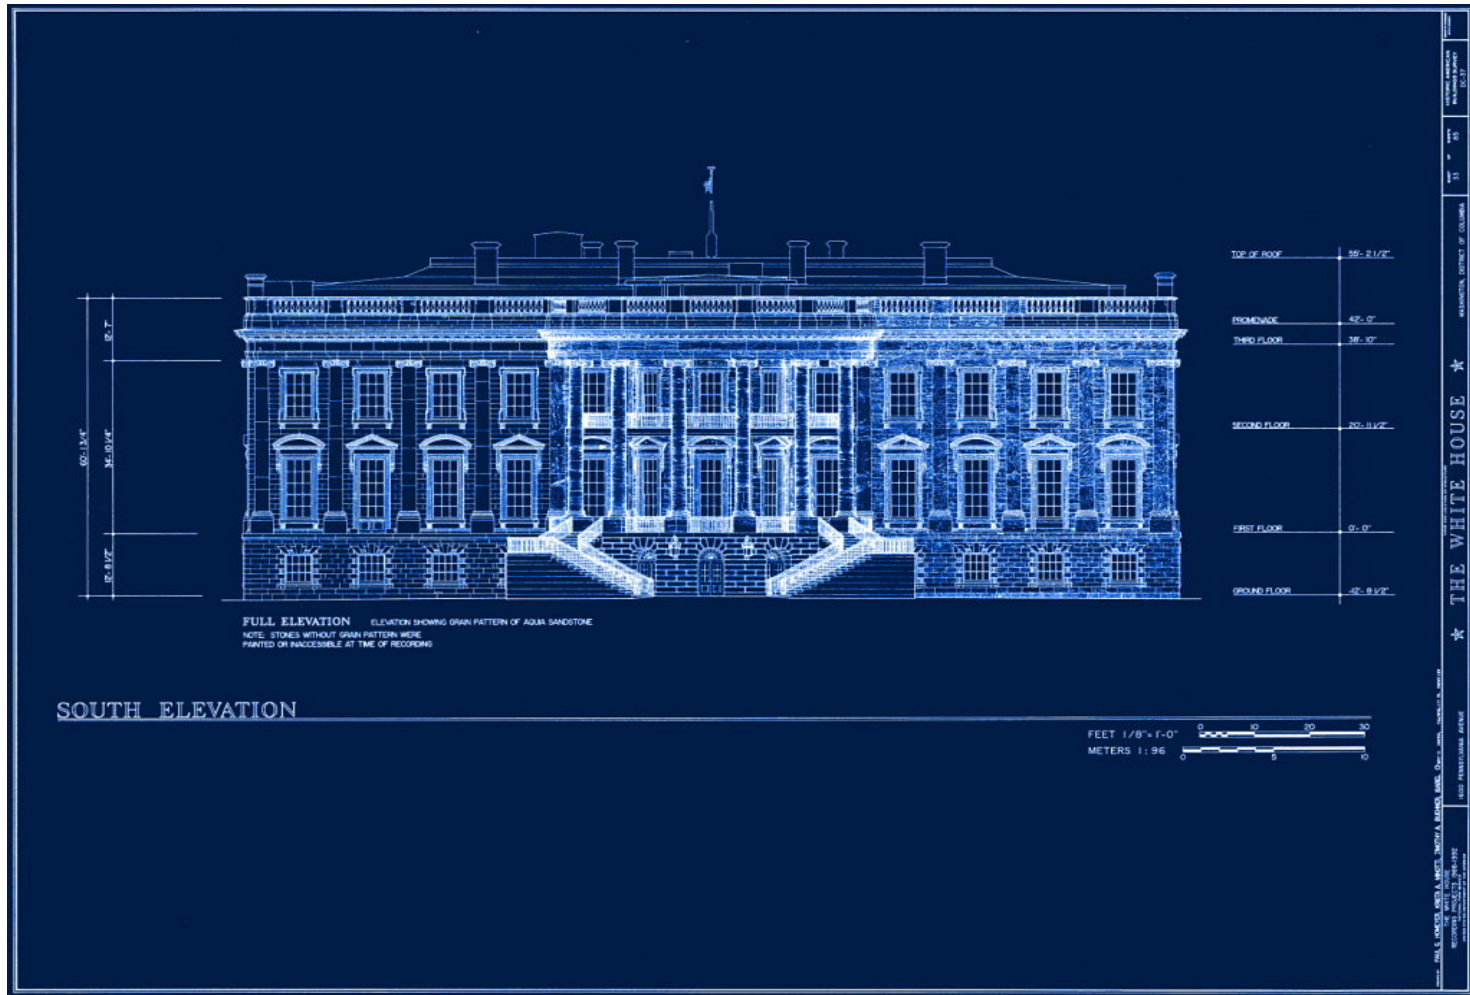

Hypothesis

The future of primary care will depend upon its ability to provide high quality, patient-centered care to those with chronic conditions.

McColl Institute

Using the Tools to Build a Medical Home

Building a Patient-Centered Medical Home

Health Information Technology is the TOOL

- To improve quality and efficiency of patient care
- To monitor and report quality improvement
- To bring about change

Using the Tools

Health IT is the use of information & communication technology for:

- Recording
- Storing
- Protecting
- Retrieving
- Electronically sharing (within health care settings)
 - clinical information
 - administrative information
 - financial information

Using the Tools to Build a Medical Home

INFORMATION TECHNOLOGY TOOLS

- * **Electronic Health Records**
- * **Registries**
- * **Personal Health Records**
- * **Secure Portals & e-mail Communication**
- * **Clinical Alerts and Reminders**
- * **Computerized Decision Support Systems (CDSS)**
- * **Hand-held / Mobile Devices**
- * **Telephony/VOIP**
- * **Relational Database Reporting**
- * **Document Management**
- * **other technologies**

Using the Tools to Build a Medical Home

- Provide Data
 - at point of care
 - for quality reporting and improvement
- Clinical Decision Support
- Prevention and Patient Education
- Improve Documentation
- Manage Workflow
- Improve Patient Satisfaction
- Improve Communication
- Enhance Skills of Staff

Using HIT To Meet the NCQA Standards for the Medical Home

-
- **Access and Communication**
 - **Patient Tracking and Registry Functions**
 - **Care Management**
 - **Patient Self-Management Support**
 - **Electronic Prescribing**
 - **Test Tracking**
 - **Referral Tracking**
 - **Performance Reporting and Improvement**
 - **Advanced Electronic Communications**

Using HIT to Meet the Core Principles of the Medical Home

- **Coordination and Continuity of Care**
 - **Communicating with:**
 - Laboratories (Bidirectional)
 - Specialists
 - Emergency rooms
 - Hospitals & Skilled Nursing Facilities
 - Home Care & Disease Management Programs
 - PATIENTS!!!!
 - Portal
 - Messaging

Using HIT to Meet the Core Principles of the Medical Home

- **Culture of Safety**

- ePrescribing

- Drug interactions, allergy checks, medical conditions
 - Verification of patient medication adherence
 - Legibility improvement and error reduction

- Test tracking

- Follow up abnormal and critical test results
 - Oral anticoagulation management
 - Tests ordered and not performed

- Referral tracking

- Referrals ordered and not performed

Using HIT To Meet Core Principles of the Medical Home

- **Data Capture**

- Standardizing nomenclature
- Using structured data
 - Process measures (examples)
 - Rates of cancer screening and immunizations
 - Depression screening
 - Diabetic retinal exam/Asthma Control test
 - Smoker query and counseling on smoking cessation
 - Patient satisfaction surveys

- **Data Retrieval**

- Outcome measures
 - Risk Stratification
- Quality improvement measurement
 - By physician and across practice
 - Report to outside organizations

Implementation of HIT

“Software fails on implementation”

Rational Unified Process, IBM

Implementation of HIT

- **Overcome Obstacles**

- Choosing and Implementing system components
- Identifying a 'Champion'
- Identifying a Team

Implementation of HIT

- **Overcome Obstacles**
 - Redesigning Workflow

Weekly Team Meeting

Implementation of HIT

- **Overcome Obstacles**
 - Managing Change

When asked "would you rather work for change, or just complain?" 81% of the respondents replied, "Do i have to pick? This is hard."

Implementation of HIT

•Managing Change

Adoption of the PDSA Process as a Change Agent

- Impetus/focus for weekly meetings
- Smooth transitions to new protocols
- Gives “permission” to take chances and try new things

Implementation of HIT

- **Overcome Obstacles**
 - Being Creative

Registry Use in the PCMH

KEY POINTS

A Registry is –

A collection of data related to patients with a specific diagnosis, condition, or procedure

A key element in collecting and tracking how well you are meeting treatment goals

A methodology to prove results and adherence to standards

Registry Use in the PCMH

Types of Registries we have been using (whether we know it or not!)

- Claims data
- PQRI
- Commercial registries
- Disease/procedure specific registries
- Registries within electronic health records

Registry Use in the PCMH

Care Management Tool

- Pre-visit planning
- Prevention
- Patient education
- Identifying high risk patients for followup/outreach

Registry Use in the PCMH

Quality Reporting

- Measure and monitor quality improvement
 - Across practice
 - By physician
- Potential trigger for pay-for-performance measures

Medical Home Boot Camp

Lessons Learned

- Building the right team is crucial
- Leverage staff by enhancing clinical skills
- Use all available tools
- Having timely information is critical for improvement
- Change is hard but not impossible
- There is always room for improvement
