

Medicare Advantage Star Ratings

Sarah Thomas

Vice President, Public Policy and Communications

Overview

- The current star rating system
- CMS's plans so far
- Making the system better
- Getting an even bigger payoff

THE CURRENT STAR RATING SYSTEM

Measures included in the system

Topic	# of Measures	Data source
Staying Healthy: Screenings, Tests & Vaccines	12	HEDIS, HOS, CAHPS
Managing Chronic conditions	7	HEDIS & HOS
Ratings of Health Plan Responsiveness and Care	6	CAHPS
Health Plan Members' Complaints Appeals and Choosing to Leave the Health Plan	5	CTM, CAHPS & CMS Audits
Health Plan's Telephone Customer Service	3	CMS Phone Monitoring

Strengths of the Star Ratings

- Incorporation into Medicare Compare
- (Almost) equal treatment of HMOs and PPOs
- Transparency – significant detail available on individual plan performance
- Summary information into stars
- New flag showing low performing contracts

Issues and areas for improvement

- Lack of measures of cost
- Many administrative measures
- No weight on measures where greatest payoff or opportunity
- Missing data

Distribution of Star ratings for 2011

- Most enrollment (60 percent) in 3 and 3.5-star plans; 24 percent in 4+ star plans
- Almost one quarter (24 percent) of plans (9 percent of enrollees) not rated
- Only three plans have 5 stars
- Including Part D ratings shifts the distribution

Source: Kaiser Family Foundation, 2011

CMS'S PLANS SO FAR

Provisions from PPACA

- Overall changes to payment rates by setting new and lower benchmarks
- Quality bonus for 4+ star plans of up to 5 percent
- Plans with higher quality scores can offer better benefits to enrollees

Potential payment increase

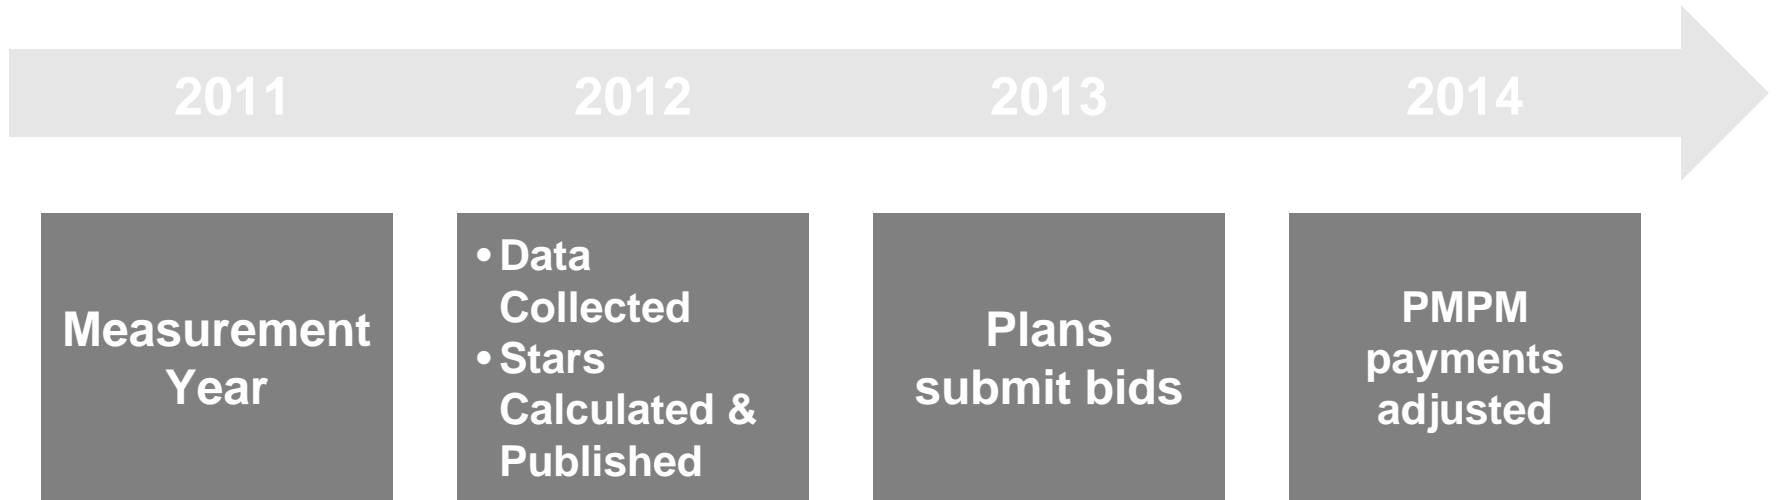

<i>100,000 member MA plan:</i>	Before Health Reform	Payments with 3.5 Stars	Payments with 4 Stars
MA County Benchmark	\$800 PMPM	\$720 PMPM (FFS level)	\$720 PMPM (FFS level)
Plan Bid	\$600 PMPM	\$600 PMPM	\$600 PMPM
Quality Bonus	N/A	\$0	\$36 (5% bonus)
Rebate	\$150 (75% of difference between bid and benchmark)	\$60 (50% of benchmark – bid)	\$84 (70% of benchmark – bid)
Total PMPM	\$750 PMPM	\$660 PMPM	\$720 PMPM
Total Annual Payment	\$900 million	\$792 million	\$864 million

\$72 Million Increase

Adapted from Health Dialog, shows full phase in

Three year lag between measurement and payment

Adapted from Health Dialog.

Demonstration

- Intended to strengthen incentives for improvement
 - Ratings based on overall scores (including Part D scores)
 - Bonus payments to contracts rated as average performers (3 or 3.5) as well as to those that receive 4 or more stars
 - Contracts with 5 stars receive higher bonus payments than under law and than 4- and 4.5- star contracts
- Costs \$1.3 billion from 2012 to 2014

MAKING THE SYSTEM BETTER

Goals for Pay for Performance

- Improve and reward performance
- Include measures that:
 - have broad consensus
 - sufficient sample size
 - reflect real opportunities for improvement
- Score performance in a way that is transparent and defensible to plans and the public
- Includes a process to add and retire measures, change scoring to reflect changes over time

Design Choices

- **Attainment vs. improvement (rewarding best plans vs. those that are working to get better)**
- **Addressing regional variation in performance (politics)**
- **Weighting some measures more than others**

Measures to Include

- **Ranking and report cards**
 - Focus on consumers and media
 - Support decision making among health plans
 - Consumer experience an important factor
- **Pay for performance**
 - Intersection of evidence based medicine, measurement, payment policy and population health
 - More focus on identifying and rewarding the most effective interventions/practices that affect the most people
 - Opportunity to give stronger incentives to do work on which plans might otherwise not focus

Scoring Issues

- Plans with small enrollment
- Plans for which a given measure is not applicable
- Relative difficulty of different measures; consider normalization
- Scoring on missing data can bias scores (e.g. the missing rate corresponds to a measure for which performance is typically poor)
- Imputation one option - based on national/regional means, information from a plans non-missing measures, measure type (admin vs. hybrid)

P4P Results 2004 – 2008

Lessons Learned

- Physician organizations respond favorably to health plan collaboration
- Physician group engagement has strengthened
- Health plan engagement has weakened
- Attention to pay and metrics needs to be balanced
- Measuring appropriate use, overuse and cost efficiency is essential but difficult

P4P Results 2004 – 2008

Lessons Learned

- Geographic variation may be symptomatic of underlying provider disparity
- Clinical and administrative data streams must be merged
- Reward improvement as well as performance, particularly to address disparities
- System-wide performance breakthrough remains elusive

GETTING AN EVEN BIGGER PAYOFF

Steady improvement on some measures, room for improvement remains

Changes in Select HEDIS Measures, 2000-2009

Accredited (solid) vs. Non-Accredited (dotted) Commercial HMOs

Medicaid Pay-for-Performance

- Pay for performance for health plans very common in state Medicaid programs; used for bonus payments and for autoassignment
- Each state has its own system – many include HEDIS (or variant)
- As of 2005, few used measures of efficiency, patient experience, structural measures (e.g. HIT adoption, accreditation)
- Little evaluation or recent synthesis of findings across states

Source: Commonwealth Fund 2007

Quality Improvement Programs in Health Care Reform

- Starting in 2012, Secretary (in consultation with stakeholders) to develop reporting requirements for all group health plans
- Secretary to develop a quality rating system for Exchanges
- Health plans in Exchanges must reward quality through market-based incentives

PPACA Definition of Quality Improvement

PPACA	How NCQA Lines Up
<p>Improve health outcomes</p> <ul style="list-style-type: none"> •Case management •Care coordination •Medical homes •Quality reporting and documentation of care •Disparities 	<ul style="list-style-type: none"> • Many measures of process (case management, continuity and coordination of care) • Intermediate outcomes measures (HbA1C, blood pressure) • HOS and CAHPS measures • Patient-centered medical home • HEDIS used to measure disparities; Multicultural Health Care Distinction
<p>Reduce readmissions</p>	<ul style="list-style-type: none"> • New measure for use in Medicare to be collected in 2011
<p>Improve patient safety</p>	<ul style="list-style-type: none"> • Ambulatory measures such as: <ul style="list-style-type: none"> – Antibiotic overuse – Medications to be avoided; monitoring – Falls prevention
<p>Wellness and health promotion</p>	<ul style="list-style-type: none"> • Measures of process around identifying needs, engagement in activities • Immunization rates • Tobacco cessation • BMI measurement

Clinician and health plan P4P

- Many quality measures in use in clinician pay for performance, including Medicare Quality Reporting System
- CMS using resource use as well as quality measures in feedback reports, eventually in payment modifier
- Could be great opportunity to align and focus together with health plan P4P

Summary

- Medicare Advantage star rating system a great opportunity to improve quality
- System needs to evolve to address missing data, add measures to capture triple aim
- Potential to get an even bigger effect if linked to other initiatives
